Readings in Computer Vision Martin A. Fischler,Oscar Firschein,1987-06 The field of computer vision combines techniques from physics mathematics psychology artificial intelligence and computer science to examine how machines might construct meaningful descriptions of their surrounding environment The editors of this volume prominent researchers and leaders of the SRI International AI Center Perception Group have selected sixty papers most published since 1980 with the viewpoint that computer vision is concerned with solving seven basic problems Reconstructing 3D scenes from 2D images Decomposing images into their component parts Recognizing and assigning labels to scene objects Deducing and describing relations among scene objects Determining the nature of computer architectures that can support the visual function Representing abstractions in the world of computer memory Matching stored descriptions to image representation Each chapter of this volume addresses one of these problems through an introductory discussion which identifies major ideas and summarizes

approaches and through reprints of key research papers Two appendices on crucial assumptions in image interpretation and on parallel architectures for vision applications a glossary of technical terms and a comprehensive bibliography and index complete the volume

Information Theory in Computer Vision and Pattern Recognition Francisco Escolano

Ruiz,Pablo Suau Pérez,Boyán Ivanov Bonev,2009-07-14 Information theory has proved to be effective for solving many computer vision and pattern recognition CVPR problems such as image matching clustering and segmentation saliency detection feature selection optimal classifier design and many others Nowadays researchers are widely bringing information theory elements to the CVPR arena Among these elements there are measures entropy mutual information principles maximum entropy minimax entropy and theories rate distortion theory method of types This book explores and introduces the latter elements through an incremental complexity approach at the same time where CVPR problems are formulated and the most representative algorithms are presented Interesting connections between information theory principles when applied to different problems are highlighted seeking a comprehensive research roadmap The result is a novel tool both for CVPR and machine learning researchers and contributes to a cross fertilization of both areas

Computer Vision 101

William Owen Ph D,2021-05-18 Today machine vision is the hottest field of artificial intelligence and machine learning and its widespread availability is a potential game changer for many applications It is the powerful tool of human vision The fantasy that a machine capable of simulating the human visual system is within our grasp since the first computer papers published in the 1960s evidenced the development of machine vision integrated into many applications
