Computing In Structural Engineering:

High Performance Computing in Structural Engineering Hojjat Adeli, Roesdiman Soegiarso, 1998-11-30 High performance multiprocessor computers provide new and interesting opportunities to solve large scale structural engineering problems. However, the development of new computational models and algorithms that exploit the unique architecture of these machines remains a challenge. High Performance Computing in Structural Engineering explores the use of supercomputers with vectorization and parallel processing capabilities in structural engineering applications. The book focuses on the optimization of large structures subjected to the complicated implicit and discontinuous constraints of commonly used design codes and presents robust parallel algorithms for analysis of these structures. The authors apply the algorithms to and analyze the performance of minimum weight designs of large steel space trusses and moment resisting frames with or without bracings consisting of discrete standard shapes. They clearly show that adroit and judicious use of vectorization techniques can improve the speedup of an optimization algorithm and that parallel processing can lead to even further speedup. With its review of the necessary background material, generous illustrations, and unique content, this is the definitive resource for the analysis and optimization of structure on shared memory multiprocessor computers. By extension, High Performance Computing in Structural Engineering will prove equally valuable in distributed computing on a cluster of workstations.

Computational Structural Engineering Yong Yuan, Junzhi Cui, Herbert A. Mang, 2009-06-10

Following the great progress made in computing technology both in computer and programming technology, computation has become one of the most powerful tools for researchers and practicing engineers. It has led to tremendous achievements in computer based structural engineering and there is evidence that current developments will even accelerate in the near future. To acknowledge this trend, Tongji University, Vienna University of Technology, and Chinese Academy of Engineering co-organized the International Symposium on Computational Structural Engineering 2009 in Shanghai. CSE 09 aimed at providing a forum for presentation and discussion of state of the art development in scientific computing applied to engineering sciences. Emphasis was given to basic methodologies, scientific development, and engineering applications. Therefore, it became a central academic activity of the International Association for Computational Mechanics (IACM), the European Community on Computational Methods in Applied Sciences (ECCOMAS), The Chinese Society of Theoretical and Applied Mechanics, the China Civil Engineering Society, and the Architectural Society of China. A total of 10 invited papers and around 140 contributed papers were presented in the proceedings of the symposium. Contributors of papers came from 20 countries around the world and covered a wide spectrum related to the computational structural engineering.
