**Computing in Statistical Science through APL** Francis John Anscombe, 2012-12-06 At the terminal seated the answering tone pond and temple bell ODAY as in the past statistical method is profoundly affected by T resources for numerical calculation and visual display The main line of development of statistical methodology during the first half of this century was conditioned by and attuned to the mechanical desk calculator Now statisticians may use electronic computers of various kinds in various modes and the character of statistical science has changed accordingly Some but not all modes of modern computation have a flexibility and immediacy reminiscent of the desk calculator They preserve the virtues of the desk calculator while immensely exceeding its scope Prominent among these is the computer language and conversational computing system known by the initials APL This book is addressed to statisticians Its first aim is to interest them in using APL in their work for statistical analysis of data for numerical support of theoretical studies for simulation of random processes In Part A the language is described and illustrated with short examples of statistical calculations Part B presenting some more extended examples of statistical analysis of data has also the further aim of suggesting the interplay of computing and theory that must surely henceforth be typical of the development of statistical science

**GLIM 82: Proceedings of the International Conference on Generalised Linear Models** R. Gilchrist, 2012-12-06 This volume of Lecture Notes in Statistics consists of the published proceedings of the first international conference to be held on the topic of generalised linear models This conference was held from 13-15 September 1982 at the Polytechnic of North London and marked an important stage in the development and expansion of the GLIM system The range of the new system tentatively named Prism is here outlined by Bob Baker Further sections of the volume are devoted to more detailed descriptions of the new facilities including information on the two different numerical methods now available Most of the data analyses in this volume are carried out using the GLIM system but this is of course not necessary There are other ways of analysing generalised linear models and Peter Green here discusses the many attractive features of APL including its ability to analyse generalised linear models Later sections of the volume cover other invited and contributed papers on the theory and application of generalised linear models Included amongst these is a paper by Murray Aitkin proposing a unified approach to statistical modelling through direct likelihood inference and a paper by Daryl Pregibon showing how GLIM can be programmed to carry out score tests A paper by Joe Whittaker extends the recent discussion of the relationship between conditional independence and log linear models and John Hinde considers the introduction of an independent random variable into a linear model to allow for unexplained variation in Poisson data

Tanur, 2012-12-06 A large number of Mosteller's friends colleagues collaborators and former students have contributed to the preparation of this volume in honor of his 70th birthday It provides a critical assessment of Mosteller's professional and research contributions to the field of statistics and its applications **Annotated Readings in the History of Statistics**

H.A. David, A.W.F. Edwards, 2013-06-29 Interest in the history of statistics has grown substantially in recent years and the subject is now covered by a number of excellent books S M Stigler's The History of Statistics 1986 gives an overview up to 1900 while Anders Hald's two encyclopedic volumes A History of Probability and Statistics before 1750 and A History of Mathematical Statistics from 1750 to 1930 published in 1990 and 1995 provide detailed mathematical discussion of the major contributions up to 1930 Hald's books have removed Isaac Todhunter's A History of Probability from the pedestal which it occupied for a century and a quarter and rendered Karl Pearson's Lecture Notes of mainly historical interest themselves Journal papers have appeared on specific topics especially in the series Studies in the History of Probability and Statistics in Biometrika and in the long sequence of papers in Archive for the History of the Exact Sciences by O Sheynin The two volumes of reprinted papers mostly from Biometrika issued in 1970 and 1977 have proved particularly valuable More recently many important papers published since 1900 have been reprinted with commentaries in the three volume Breakthroughs in Statistics 1992 1997 Stigler's Statistics on the Table 1999 provides illuminating vignettes In addition specialized books have appeared on particular topics such as A I Dale's A History of Inverse Probability 1991 1999 and R W Farebrother's Fitting Linear Relationships 1995 The pioneering book on the early period F N

**Advanced Statistics** Shelby J. Haberman, 1996-06-20 Advanced Statistics provides a rigorous development of statistics that emphasizes the definition and study of numerical measures that describe population variables Volume 1 studies properties of commonly used descriptive measures Volume 2 considers use of sampling from populations to draw inferences concerning properties of populations The volumes are intended for use by graduate students in statistics and professional statisticians although no specific prior knowledge of statistics is assumed The rigorous treatment of statistical concepts requires that the reader be familiar with mathematical analysis and linear algebra so that open sets continuous functions differentials Raman integrals matrices and vectors are familiar terms **Breakthroughs in Statistics** Samuel Kotz, Norman L. Johnson, 1993-06-11 **Statistical Models Based on Counting Processes** PER KRAGH ANDERSEN, Ornulf Borgan, Richard D. Gill, Niels Keiding, 1996-12-20 Modern survival analysis and more general event history analysis may be effectively handled within the mathematical framework of counting processes This book presents this theory which has been the subject of intense research activity over the past 15 years The exposition of the theory is integrated with

Careful presentation of many practical examples drawn almost exclusively from the authors own experience with detailed numerical and graphical illustrations Although *Statistical Models Based on Counting Processes* may be viewed as a research monograph for mathematical statisticians and biostatisticians almost all the methods are given in concrete detail for use in practice by other mathematically oriented researchers studying event histories demographers econometricians epidemiologists actuarial mathematicians reliability engineers and biologists Much of the material has so far only been available in the journal literature if at all and so a wide variety of researchers will find this an invaluable survey of the subject

Federer,1993 Intercropping is an area of research for which there is a desperate need both in developing countries where people are rapidly depleting scarce resources and still starving and in developed countries where more ecologically and economically sound ways of feeding ourselves must be developed The only published guidelines for conducting such research and analyzing the data have been scattered about in various journal articles many of which are hard to find This book condenses these methods and will be immensely valuable to agricultural researchers and to the statisticians who help them design their experiments and interpret their results *Computer Science and Statistics* Karl W.
