## **Computer Models Of The Environment:**

*Computer Models in Environmental Planning* Steven I. Gordon, 2012-12-06 The purpose behind Computer Models in Environmental Planning is to provide a practical and applied guide to the use of these models in environmental planning and environmental impact analysis Models concerning water quality air quality stormwater runoff land capability evaluation land information systems and hazardous waste disposal are reviewed and critiqued I have tried to emphasize the practical problems with data computer capabilities and other analytical questions that must be faced by the practitioner attempting to use these models Thus I do not delve too deeply into the theoretical underpinnings of the models referring the reader instead to specialized references in this area For each environmental area I review the major models and methods comparing their assumptions ease of use and other characteristics Practical examples illustrate the benefits and problems of using each model Computer models are increasingly being used by planning and engineering professionals for locating and planning public works and industrial commercial and residential projects while evaluating their environmental impacts The requirements of the National Environmental Policy Act and related state laws as well as separate state and federal laws concerning air and water quality stormwater runoff land use and hazardous waste disposal have made the use of these methods mandatory in many circumstances Yet explanations of both the benefits and problems associated with supposedly easy to use computer versions of these models and methods remain at best difficult to retrieve and at worst incomplete

The Plague of Models Kenneth P. Green, 2023-03-31 Sometimes reading the news it seems we are drowning in a sea of risks Every day dozens of news articles proclaim some activity some exposure some change in the environment exposes us to new and terrifying risks And every day governments in developed countries pop out regulations to ensure that we make those changes in behavior to address those supposed risks whether we want to or not You probably think such claims and regulation of risk are backed up by something resembling actual real world evidence of harm You probably assume that governments when regulating are relying on hard data physical observations of exposures to a potential harm physical measurements of harms that result from exposure and that sort of thing But if you assume that you are probably wrong Since the computer revolution of the 1970s actual hard evidence of risk have been replaced both in the estimation of risks and in the regulation of risks with computer models simulations of reality that may have little or no relation to the actual reality in which actual people live This book is about the influence of computer risk modeling on public policy specifically the giant gushing fountain of EHS regulations that have poured forth since the 1970s That shift to simulation of risk has led to a massive increase in regulation a Plague of Regulation that rests on the Plague of Models
