

CLOUD COMPUTING

UNIT - I

Introduction to cloud computing fundamentals:

Cloud computing at a glance, defining a cloud, cloud computing reference model, types of services (IaaS, PaaS, SaaS), cloud deployment models (public, private, hybrid), utility computing, cloud computing characteristics and benefits, cloud service providers (Amazon web services, Microsoft Azure, Google App Engine).

Introduction:

Computing is being transformed into a model consisting of services that are provided like utilities such as water, electricity, gas and telephony.

- In such a model, users can access services based on their requirements without worrying about their location.
- cloud computing is the most recent emerging paradigm to turn the vision of "computing utilities" into reality.
- cloud computing is a technological advancement that focuses on the way we design computing systems, develop applications, and leverage existing services for building software.
- It is based on dynamic provisioning, which means it can be applied not only to services but also computing paradigms.
- Resources are made available through the internet
