When multiple forces act on an object, they combine to determine the object's acceleration. Understanding how forces and acceleration combine to determine an object's motion is a key concept in physics. This worksheet will help you understand how forces and acceleration combine to determine an object's motion.</p> <p>Newton's second law states that the acceleration of an object is directly proportional to the net force acting on it and inversely proportional to its mass. This means that if the net force on an object increases, the acceleration will also increase, and if the mass of the object increases, the acceleration will decrease.</p> <p>Forces also interact to determine the direction of an object's motion. For example, pushing a cart with a small weight will cause it to accelerate in the direction of the push. If you push a cart with a larger weight, the acceleration will be smaller. Similarly, pushing a cart with a larger weight will cause it to accelerate in the opposite direction of the push.</p> </div> <p>Answer the questions below for each question.</p> <ol style="list-style-type: none"> <li>Which of the following is NOT a force?             <ol style="list-style-type: none"> <li>Velocity</li> <li>Acceleration</li> <li>Force</li> <li>Displacement</li> </ol> </li> <li>Which of the following is NOT a force?             <ol style="list-style-type: none"> <li>Velocity</li> <li>Acceleration</li> <li>Force</li> <li>Displacement</li> </ol> </li> <li>Which of the following is NOT a force?             <ol style="list-style-type: none"> <li>Velocity</li> <li>Acceleration</li> <li>Force</li> <li>Displacement</li> </ol> </li> <li>Which of the following is NOT a force?             <ol style="list-style-type: none"> <li>Velocity</li> <li>Acceleration</li> <li>Force</li> <li>Displacement</li> </ol> </li> </ol> <div style="text-align: right;">  </div>
