Data Abstraction and Program Development Using Modula-2 Reinhold Friedrich Hille,1989 **Data Abstraction and Program Development Using Pascal** Reinhold Friedrich Hille,1988 **Abstraction and Specification in Program Development** B. Liskov,John Guttag,1986 Abstraction and Specification in Program Development offers professionals in program design and software engineering a methodology that will enable them to construct programs that are reliable and reasonably easy to understand modify and maintain Good programming involves the systematic mastery of complexity and this book provides the first unified treatment of the techniques of abstraction and specification which the authors argue are the linchpin of any effective approach to programming They place particular emphasis on the use of data abstraction to produce highly modular programs The authors focus on the process of decomposing large program projects into independent modules that can be assigned to independent working groups They discuss methods of decomposition the kinds of modules that are most useful in this process and techniques to increase the likelihood that modules produced can in fact be recombined to solve the original programming problem There are many examples of abstractions throughout the text and each chapter ends with pertinent references and exercises Most of the sample implementations in the book are written in CLU one of a growing number of languages able to support data abstraction Sufficient material is included however to allow the reader to work in Pascal as well The material in this book was developed by the authors during a decade of teaching undergraduate graduate and professional level courses Barbara Liskov the developer of CLU is Professor and John Guttag an Associate Professor of Computer Science at MIT Abstraction and Specification in Program Development is included in the MIT Electrical Engineering and Computer Science series **SOFTWARE DESIGN, ARCHITECTURE AND ENGINEERING** BHATT, PRAMOD CHANDRA P.,2021-07-01 This textbook aims to prepare students as well as practitioners for software design and production Keeping in mind theory and practice the book keeps a balance between theoretical foundations and practical considerations The book by and large meets the requirements of students at all levels of computer science and engineering information technology for their Software design and Software engineering courses The book begins with concepts of data and object This helps in exploring the rationale that guide high level programming language HLL design and object oriented frameworks Once past this post the book moves on to expand on software design concerns The book emphasizes the centrality of Parnas s separation of concerns in evolving software designs and architecture The book extensively explores modelling frameworks such as Unified Modelling Language UML and Petri net based methods Next the book covers architectural principles and software engineering practices such as Agile emphasizing software testing during development It winds up with case studies demonstrating how systems evolve from basic concepts to final products for quality software designs TARGET AUDIENCE Undergraduate postgraduate students of Computer Science and Engineering and Information Technology Postgraduate students of Software Engineering Software Systems **Data Abstraction,**
