**Data Analysis of Asymmetric Structures** Takayuki Saito, Hiroshi Yadohisa, 2004-12-28 Data Analysis of Asymmetric Structures provides a comprehensive presentation of a variety of models and theories for the analysis of asymmetry and its applications and provides a wealth of new approaches in every section It meets both the practical and theoretical needs of research professionals across a wide range of disciplines and *Methods for the Analysis of Asymmetric Proximity Data* Giuseppe Bove, Akinori Okada, Donatella Vicari, 2021-08-14 This book provides an accessible introduction and practical guidelines to apply asymmetric multidimensional scaling cluster analysis and related methods to asymmetric one mode two way and three way asymmetric data A major objective of this book is to present to applied researchers a set of methods and algorithms for graphical representation and clustering of asymmetric relationships Data frequently concern measurements of asymmetric relationships between pairs of objects from a given set e.g subjects variables attributes collected in one or more matrices Examples abound in many different fields such as psychology sociology marketing research and linguistics and more recently several applications have appeared in technological areas including cybernetics air traffic control robotics and network analysis The capabilities of the presented algorithms are illustrated by carefully chosen examples and supported by extensive data analyses A review of the specialized statistical software available for the applications is also provided This monograph is highly recommended to readers who need a complete and up to date reference on methods for asymmetric proximity data analysis

**Structure and Dynamics of Asymmetric Interactions** Naohito Chino, 2025-01-03 This book integrates the fundamentals of asymmetric multidimensional scaling spectral graph theory graph embedding theory and various dynamical systems theories that deal with the static and dynamic aspects of asymmetric phenomena In this way it provides a comprehensive introduction to theories and methods for analyzing phenomena observed universally in social behavioral economical geographical biological neural chemical reaction and other networks The topics addressed in here include the notions of asymmetric similarity matrices graph spectra dimension reduction and difference and differential equations to describe the dynamics of networks bifurcation of vector fields Mandelbrot sets fractals and chaos and Hilbert spaces Illustrated by carefully chosen examples and supported by extensive simulation studies the book is highly recommended to readers who seek to discover static asymmetric structures among members or nodes It also appeals to those who want to understand the kinds of dynamics that are theoretically possible in their research domains

**Test Data Engineering** Kojiro Shojima, 2022-08-13 This is the first technical book that considers tests as public tools and examines how to engineer and process test data extract the structure within the data to be visualized and thereby make test results useful for students teachers and the society The author does not differentiate test data analysis from data engineering and information visualization This monograph introduces the following methods of engineering or processing test data including the latest machine learning techniques classical test theory CTT item response theory IRT latent class analysis LCA latent

rank analysis LRA biclustering co clustering and Bayesian network model BNM CTT and IRT are methods for analyzing test data and evaluating students abilities on a continuous scale LCA and LRA assess examinees by classifying them into nominal and ordinal clusters respectively where the adequate number of clusters is estimated from the data Biclustering classifies examinees into groups latent clusters while classifying items into fields factors Particularly the infinite relational model discussed in this book is a biclustering method feasible under the condition that neither the number of groups nor the number of fields is known beforehand Additionally the local dependence LRA local dependence biclustering and bicluster network model are methods that search and visualize inter item or inter field network structure using the mechanism of BNM As this book offers a new perspective on test data analysis methods it is certain to widen readers perspective on test data analysis

**Statistical Models for Data Analysis** Paolo Giudici,Salvatore Ingrassia,Maurizio Vichi,2013-07-01 The papers in this book cover issues related to the development of novel statistical models for the analysis of data They offer solutions for relevant problems in statistical data analysis and contain the explicit derivation of the proposed models as well as their implementation The book assembles the selected and refereed proceedings of the biannual conference of the Italian Classification and Data Analysis Group CLADAG a section of the Italian Statistical Society
