Databases For Cardiology:

Databases for Cardiology G.T. Meester, F. Pinciroli, 2012-12-06 A database is in principle just a large collection of related or separate data systematically stored in a computer. It should be possible for the data to be easily entered into the database structure and afterwards also easily read, corrected, and processed. The later analysis of data from such a database is greatly enhanced by the availability of special query languages and statistical analysis programs not only for serial items but also for large combinations of data. Query languages such as SQL (Structured Query Language) developed especially for these purposes make databases easily accessible also to researchers who may not be very well versed in computer programming. The cardiologist, medical clinician, and researcher of today is of necessity confronted more and more with computer-based data storage. Interest is of course focused primarily on the clinical use of such databases more than on the technical design itself, except for some very specific personalized applications. For the latter approach, there are at present many software packages commercially available, especially designed for use in the personal computer environment. This book is comprised out of a number of contributions by various authors with differing backgrounds and from many different countries. The editors, being a cardiologist and an information scientist, have strived to achieve an equilibrium between these two fields. The chapters in this book form a cross section of the many approaches to database design and implementation in the area of cardiology.

Intelligence-Based Cardiology and Cardiac Surgery Anthony C. Chang, Alfonso Limon, Robert Brisk, Francisco Lopez-Jimenez, Louise Y Sun, 2023-09-06 *Intelligence Based Cardiology and Cardiac Surgery: Artificial Intelligence and Human Cognition in Cardiovascular Medicine* provides a comprehensive survey of artificial intelligence concepts and methodologies with real-life applications in cardiovascular medicine. Authored by a senior physician data scientist, the book presents an intellectual and academic interface between the medical and data science domains. The book's content consists of basic concepts of artificial intelligence and human cognition applications in cardiology and cardiac surgery. This portfolio ranges from big data, machine learning, and deep learning cognitive computing and natural language processing in cardiac disease states such as heart failure, hypertension, and pediatric heart care. The book narrows the knowledge and expertise chasm between the data scientists, cardiologists, and cardiac surgeons, inspiring clinicians to embrace artificial intelligence methodologies, educate data scientists about the medical ecosystem, and create a transformational paradigm for healthcare and medicine. Covers a wide range of relevant topics from real-world data, large language models, and supervised machine learning to deep reinforcement and federated learning. Presents artificial intelligence concepts and their applications in many areas in an easy-to-understand format accessible to clinicians and data scientists. Discusses using artificial intelligence and related technologies with cardiology and cardiac surgery in a myriad of venues and situations. Delineates the necessary elements for successfully implementing artificial intelligence in cardiovascular medicine for improved patient outcomes. Presents the regulatory, ethical, legal, and financial issues embedded in artificial intelligence.
