Anaesthesia: An Introduction Ian Harley, Phillipa Hore, 2012-09-01 Anaesthesia is an evolving medical speciality with new drugs, techniques and equipment constantly being sought to improve patient safety and outcomes. In this book Australasian medical students, junior hospital doctors working in anaesthesia and critical care and anaesthesia nurses and technicians will find a succinct and readable introduction to the principles and practice of anaesthesia. The book is structured as follows: It opens with an overview of general anaesthesia, regional anaesthesia and sedation. Requisite knowledge of physiology and pharmacology is outlined. Comprehensive coverage is then provided of core topics: perioperative management of patients undergoing surgical procedures, anaesthetic techniques, anaesthetic subspecialties, pain, anaesthetic equipment and the anaesthetic environment. For this fifth edition of the book, all original material has been thoroughly reviewed and updated. Extensive revisions have been made to coverage of preoperative assessment, intraoperative management, anaesthetic emergencies and postoperative care. Coverage of anaesthetic subspecialties has been substantially expanded. The section on resuscitation includes coverage of new guidelines and equipment. The section on acute pain is new, highlighting the importance of this topic.

Principles and Practice of Regional Anaesthesia Graeme McLeod, Colin McCartney, J. A. W. Wildsmith, Tony Wildsmith, 2013 The fourth edition of this highly successful textbook discusses the practical applications of the various methods of regional anaesthesia, including ultrasound, as well as giving an account of their theoretical aspects. The well-established author team use their experience to provide a practical and stimulating book which reflects everyday clinical activity, supplemented by high definition ultrasound images and schematic diagrams. The book will also discuss the place of regional anaesthesia in current medical practice, particularly with regard to pain processes, ultrasound imaging and patient outcomes. Regional anaesthesia is a rapidly expanding subspecialty of anaesthesia, routine provision of long-lasting pain relief and the introduction of real-time ultrasound block has fuelled a demand for cadaver and ultrasound-based anatomy training courses. Thus, it is more important than ever to have a thorough grounding in this exciting subspecialty.
