Leviaudi, 2012-12-06 The international Workshop on Data Analysis in Astronomy was intended to give a presentation of experiences that have been acquired in data analysis and image processing developments and applications that are steadily growing up in Astronomy The quality and the quantity of ground and satellite observations require more sophisticated data analysis methods and better computational tools The Workshop has reviewed the present state of the art explored new methods and discussed a wide range of applications The topics which have been selected have covered the main fields of interest for data analysis in Astronomy The Workshop has been focused on the methods used and their significant applications Results which gave a major contribution to the physical interpretation of the data have been stressed in the presentations Attention has been devoted to the description of operational system for data analysis in astronomy The success of the meeting has been the result of the coordinated effort of several people from the organizers to those who presented a contribution and or took part in the discussion We wish to thank the members of the Workshop scientific committee Prof M Cappacioli Prof G De Biase Prof G Sedmak Prof A Zichichi and of the local organizing committee Dr R Buccheri and Dr M C Maccarone together with Miss P Savalli and Dr A Gabriele of the Ettore Majorana Center for their support and the invaluable part in arranging the Workshop

Data Analysis in Astronomy III V. di Gesù, L. Scarsi, R. Buccheri, P. Crane, M.C. Maccarone, H.U. Zimmerman, 2012-12-06 In the book are reported the main results presented at the Third International Workshop on Data Analysis in Astronomy held at the Ettore Majorana Center for Scientific Culture Erice Sicily Italy on June 20-27 1988 The Workshop was the natural evolution of the two previous ones The main goal of the first edition Erice 1984 was to start a scientific interaction between Astronomers and Computer Scientists Aim of the second Erice 1986 was to look at the progress in data analysis methods and dedicated hardware technology Data analysis problems become harder whenever the data are poor in statistics or the signal is weak and embedded in structured background Experiments collecting data of such a nature require new and non standard methodologies Possibilistic approaches could be merged with the statistical ones in order to formalize all the knowledge used by the scientists to reach conclusions Moreover the last decade has been characterized by very fast developments of Intelligent Systems for data analysis knowledge based systems that would be useful to support astronomers in complex decision making For these reasons the last edition of the workshop was intended to provide an overview on the state of the art in the data analysis methodologies and tools in the new frontiers of the astrophysics y astronomy neutrino astronomy gravitational waves background radiation and extreme cosmic ray energy spectrum The book is organized in two sections Data analysis methods and tools New frontiers in astronomy
