

Flat File VS Database

DatabaseTown.com

A flat file is a type of data storage that contains a single table of data, with each row representing a single record and each column representing a field within that record.

VS

A database is a collection of data that is organized and stored in a structured way. It allows for the storage, retrieval, and manipulation of data in a way that is efficient and easy to use.

Feature	Flat File	Database
Structure	Simple, unstructured format with records stored in plain text files	Highly structured format with tables, rows, and columns
Organization	Records are stored in a single file or multiple files, but there is no relationship between them	Records are organized into tables, with relationships established between tables through keys and indexes
Access	Data is accessed by reading the entire file sequentially, making it less efficient for large datasets	Data is accessed using SQL (Structured Query Language) commands, which are more efficient for large datasets and allow for more advanced querying and manipulation
Scalability	Limited scalability, as adding more data requires creating new files or appending to existing ones	High scalability, as data can be easily added, updated, and deleted without affecting the overall structure of the database
Security	Limited built-in security features, and data is vulnerable to corruption or loss if the file is not backed up properly	Built-in security features, such as user accounts and permissions, and data is protected against corruption or loss through automatic backups and transaction logs
Examples	CSV, TSV files	SQL databases, like MySQL, Oracle, SQL Server
