*Measuring the Gains from Medical Research* Kevin M. Murphy, Robert H. Topel, 2010-04-15 In 1998 health expenditures in the United States accounted for 12.9% of national income the highest share of income devoted to health in the developed world The United States also spends more on medical research than any other country in 2000 the federal government dedicated 18.4 billion to it compared with only 3.7 billion for the entire European Union In this book leading health economists ask whether we are getting our money's worth From an economic perspective they find the answer is a resounding yes in fact considering the extraordinary value of improvements to health we may even be spending too little on medical research The evidence these papers present and the conclusions they reach are both surprising and convincing that growth in longevity since 1950 has been as valuable as growth in all other forms of consumption combined that medical advances producing 10% reductions in mortality from cancer and heart disease alone would add roughly 10 trillion a year's GDP to the national wealth or that the average new drug approved by the FDA yields benefits worth many times its cost of development The papers in this book are packed with these and many other surprising revelations their sophisticated analysis persuasively demonstrating the massive economic benefits we can gain from investments in medical research For anyone concerned about the cost and the value of such research from policy makers to health care professionals and economists this will be a landmark book

new place and this event has been a subject of deep fascination and controversy No written records and scant archaeological evidence exist to tell us what happened or how it took place Many different models have been proposed to explain how the Americas were peopled and what happened in the thousands of years that followed A study of both past and present ORIGIN explores how genetics is currently being used to construct narratives that profoundly impact Indigenous peoples of the Americas It serves as a primer for anyone interested in how genetics has become entangled with identity in the way that society addresses the question Who is indigenous *The College of Pharmacy of the City of New York* Curt Paul Wimmer,1929 JPT ,1984 Catalog of Copyright Entries, Third Series Library of Congress.
