Wireless Communications Giorgio A. Vitetta,Desmond P. Taylor,Giulio Colavolpe,Fabrizio Pancaldi,Philippa A. Martin,2013-03-29 This book introduces the theoretical elements at the basis of various classes of algorithms commonly employed in the physical layer and in part in MAC layer of wireless communications systems It focuses on single user systems so ignoring multiple access techniques Moreover emphasis is put on single input single output SISO systems although some relevant topics about multiple input multiple output MIMO systems are also illustrated Comprehensive wireless specific guide to algorithmic techniques Provides a detailed analysis of channel equalization and channel coding for wireless applications Unique conceptual approach focusing in single user systems Covers algebraic decoding modulation techniques channel coding and channel equalisation *Channel Codes* William Ryan,Shu Lin,2009-09-17 Channel coding lies at the heart of digital communication and data storage and this detailed introduction describes the core theory as well as decoding algorithms implementation details and performance analyses In this book Professors Ryan and Lin provide clear information on modern channel codes including turbo and low density parity check LDPC codes They also present detailed coverage of BCH codes Reed Solomon codes convolutional codes finite geometry codes and product codes providing a one stop resource for both classical and modern coding techniques Assuming no prior knowledge in the field of channel coding the opening chapters begin with basic theory to introduce newcomers to the subject Later chapters then extend to advanced topics such as code ensemble performance analyses and algebraic code design 250 varied and stimulating end of chapter problems are also included to test and enhance learning making this an essential resource for students and practitioners alike **Space-Time Coding for Broadband Wireless Communications** Georgios B. Giannakis,2007 The next generation of wireless communications systems will offer practically unlimited mobility and high data rate services such as streaming video In order to provide these capabilities wireless networks will need to have extremely high bandwidth efficiency One of the most promising techniques for ensuring this efficiency is space time coding *Joint Source-channel Coding Techniques for Wireless Channels and Packet Networks* Murari Srinivasan,1999 **Joint Source-channel Coding for Video Encoding and Delivery on Wireless Channels** Yong Pei,1999 Applied Informatics and Communication, Part IV Jun Zhang,2011-08-02 The five volume set CCIS 224 228 constitutes the refereed proceedings of the International conference on Applied Informatics and Communication ICAIC 2011 held in Xi an China in August 2011 The 446 revised papers presented were carefully reviewed and selected from numerous submissions The papers cover a broad range of topics in computer science and interdisciplinary applications including control hardware and software systems neural computing wireless

networks information systems and image processing *Channel Coding Techniques for Network Communication* Lele Wang,2015 Next generation wireless networks aim to enable order of magnitude increases in connectivity capacity and speed Such a goal can be achieved in part by utilizing larger frequency bandwidth or by deploying denser base stations As the number of wireless devices is exploding however it is inevitable that multiple devices communicate over the same time and same spectrum Consequently improving the spectral efficiency in wireless networks with multiple senders and receivers becomes the key challenge This dissertation investigates low complexity channel coding techniques that implement canonical random coding schemes in network information theory such as universal channel coding superposition coding rate splitting successive cancellation simultaneous decoding decode forward relaying compress forward relaying and Slepian Wolf coding In representative communication scenarios such as compound channels interference channels broadcast channels and relay channels the proposed channel coding techniques achieve the best known information theoretic performance some utilizing the recently invented polar codes and some making use of the commercial off the shelf codes e g turbo and LDPC codes These techniques have a potential to become important building blocks towards a general theory of channel coding techniques for the next generation high spectral efficiency low power broad coverage wireless communication

Non-Binary Error Control Coding for Wireless Communication and Data Storage Rolando Antonio Carrasco,Martin Johnston,2008-11-20 Comprehensive introduction to non binary error correction coding techniques Non Binary Error Control Coding for Wireless Communication and Data Storage explores non binary coding schemes that have been developed to provide an alternative to the Reed Solomon codes which are expected to become unsuitable for use in future data storage and communication devices as the demand for higher data rates increases This book will look at the other significant non binary coding schemes including non binary block and ring trellis coded modulation TCM codes that perform well in fading conditions without any expansion in bandwidth use and algebraic geometric codes which are an extension of Reed Solomon codes but with better parameters Key Features Comprehensive and self contained reference to non binary error control coding starting from binary codes and progressing up to the latest non binary codes Explains the design and construction of good non binary codes with descriptions of efficient non binary decoding algorithms with applications for wireless communication and high density data storage Discusses the application to specific cellular and wireless channels and also magnetic storage channels that model the reading of data from the magnetic disc of a hard drive Includes detailed worked examples for each coding scheme to supplement the concepts described in this book Focuses on the encoding decoding and performance of both block and convolutional non binary codes and covers the K tter Vardy algorithm and Non binary LDPC codes This book will be an excellent reference for researchers in the wireless communication and data storage communities as well as development research engineers in telecoms and storage companies Postgraduate students in these fields will also find this book of interest **Modulation and Coding Techniques in Wireless Communications** Evgenii Krouk,Sergei

Semenov,2011-02-21 The high level of technical detail included in standards specifications can make it difficult to find the correlation between the standard specifications and the theoretical results This book aims to cover both of these elements to give accessible information and support to readers It explains the current and future trends on communication theory and shows how these developments are implemented in contemporary wireless communication standards Examining modulation coding and multiple access techniques the book is divided into two major sections to cover these functions The two stage approach first treats the basics of modulation and coding theory before highlighting how these concepts are defined and implemented in modern wireless communication systems Part 1 is devoted to the presentation of main L1 procedures and methods including modulation coding channel equalization and multiple access techniques In Part 2 the uses of these procedures and methods in the wide range of wireless communication standards including WLAN WiMax WCDMA HSPA LTE and cdma2000 are considered An essential study of the implementation of modulation and coding techniques in modern standards of wireless communication Bridges the gap between the modulation coding theory and the wireless communications standards material Divided into two parts to systematically tackle the topic the first part develops techniques which are then applied and tailored to real world systems in the second part Covers special aspects of coding theory and how these can be effectively applied to improve the performance of wireless communications systems
