Cognitive Science The Science Of Intelligent Systems:

Cognitive Science George F. Luger, 1994-05-25 The interdisciplinary field of cognitive science brings together elements of cognitive psychology mathematics perception linguistics and artificial intelligence Given this breadth textbooks have had difficulty providing balanced coverage most resort to disjointed edited treatises that prove difficult to use Cognitive Science provides a unified and comprehensive look at the field from foundations to applications Luger explores the logical and philosophical bases of cognitive science with multiple models of intelligence including neural networks and connectionism Practical programming examples are included along with an introduction to PROLOG [Cognitive Science \(3 Volume Set\)](#)

Noel Sheehy, Antony J. Bernard, Timothy E. Goldsmith, 2006-08-15 The leading thinkers from the cognitive science tradition participated in a workshop sponsored by Sandia National Laboratories in July of 2003 to discuss progress in building their models The goal was to summarize the theoretical and empirical bases for cognitive systems and to present exemplary developments in the field Following the workshop a great deal of planning went into the creation of this book Eleven of the twenty six presenters were asked to contribute chapters and four chapters are the product of the breakout sessions in which critical topics were discussed among the participants An introductory chapter provides the context for this compilation Cognitive Systems thus presents a unique merger of cognitive modeling and intelligent systems and attempts to overcome many of the problems inherent in current expert systems It will be of interest to researchers and students in the fields of cognitive science computational modeling intelligent systems artificial intelligence and human computer interaction **Cognitive Science (Vol. 3)** Noel Sheehy, Antony J. Cognitive Psychology and Artificial Intelligence Morton Wagman,1993-02-28 The nature of cognition is examined by the methods of experimental cognitive psychology and the theoretical models of computational psychology First explained is the nature and objectives of artificial intelligence symbolic and connectionist paradigms the architecture of cognition and characteristics of a general theory of intelligence Wagman then examines theory and research in human reasoning and reasoning systems Experimental research in deductive and inductive reasoning the nature of artificial intelligence reasoning systems nonmonotonic and common sense reasoning and general types of reasoning in artificial intelligence are examined Next the author examines the nature of human problem solving and problem solving systems Problem representation methods and their duplication by artificial intelligence is discussed at length Concepts and research in human learning and learning systems are also reviewed as are the nature of human expertise and expert systems Major characteristics of expertise including deep knowledge reasoning strategies and pattern recognition are described and exemplified in research concerned with medical expertise The nature of intelligence and intelligence systems is examined and the physical symbol system hypothesis and its results are analyzed The author covers an artificial intelligence system that emulates the cognitive processes in scientific discovery and its implications for human creativity

Kaplan,Artificial Intelligence and Psychology Project,CARNEGIE-MELLON UNIV PITTSBURGH PA ARTIFICIAL INTELLIGENCE AND PSYCHOLOGY PRO JECT.,1988 Intelligence is closely related with adaptivity with problem solving learning and evolution A science of intelligent systems has to be a science of adaptive systems with all which that entails for the difficulty of finding genuine invariants Some of the invariance in intelligence is imposed by the structure of the inner environment the limits for example of human short term memory Some of it is imposed by the outer environment the need to search very large spaces selectively Some of the invariance is to be found in the structure of learning systems rather than in the highly adapted performance systems they produce But in cognitive science we must be prepared to recognize that the invariants in an adaptive system are likely to be limited to specific times and places that in the long run almost any aspect of them can change adaptively Keywords Cognitive science Simulation modeling Intelligence Individual differences SDW

The Sciences of Cognition Morton Wagman,1995-03-30 Wagman presents a general unified theory of artificial and human intelligence under which the nature of human reasoning problem solving analogical thinking and scientific discovery is examined from theoretical research and computational perspectives The work analyzes foundational issues regarding the nature of intelligent systems and intelligence and significant and current research in the area is discussed This book will be of interest to scholars dealing with psychology artificial intelligence and cognitive science *Cognitive Science and the Symbolic Operations of Human and Artificial Intelligence* Morton Wagman,1997-09-30 This scholarly book presents and critically evaluates the outstanding contributions of both cognitive psychology and artificial intelligence to our understanding of the nature of intelligence and intelligent systems Examining conceptual thought across the domains of reasoning and logic language and analogy and scientific discovery Wagman compares human reasoning with computer reasoning Of special interest to readers is the general critique of artificial intelligence research directed toward the ultimate objective of mapping and surpassing all of human knowledge The first chapter examines the theoretical foundations of the logical approach to artificial intelligence and the centrality of declarative knowledge and the predicate calculus The artificial intelligence system CYC is critically examined with respect to its avowed objective of matching or surpassing human intelligence The second chapter focuses on the probabilistic contrast model of causal reasoning and underscores its significance as a mathematical conceptualization of human reasoning In the third chapter the ARCS Analogical Retrieval by Constraint Satisfaction system is discussed and its psychological validity is evaluated In the fourth chapter scientific heuristics characteristics of different

developmental levels and differentially applied in the discovery spaces of hypotheses and experiments are analyzed in the context of the philosophy of science The fifth chapter presents the logic principles and applications of PAULINE a pragmatic language generation system and explains human language pragmatics
