Collaborative Learning Vol 59 Underlying Processes And Effective Techniques:

Collaborative Learning: Underlying Processes and Effective Techniques Kris Bosworth, Sharon J. Hamilton, 1994-10-27
The demographic makeup of the student population in higher education has changed in dramatic ways over the past decade. These changes have motivated questions about what constitutes knowledge and about how we learn and understand new concepts, processes, and skills. Working from the premise that knowledge is not a quantifiable mass of information to be transmitted but rather a socially constituted process of making meaning within constantly changing and interacting contexts, the authors of this volume seek to define and extend current understanding of collaborative learning in higher education. Each chapter blends theory and practice as it explores a particular aspect of the processes underlying collaborative learning. Case studies from three universities demonstrate collaborative learning in action, its potential, and its challenges. This volume uses information about current developments in collaborative learning across the country to extend our understanding of its possibilities and offer guidance to faculty who wish to establish effective collaborative learning classrooms. This is the 59th issue of the quarterly journal *New Directions for Teaching and Learning*. *Online Collaborative Learning* Tim S. Roberts, 2004-01-01 *Online Collaborative Learning: Theory and Practice* provides a resource for researchers and practitioners in the area of online collaborative learning, also known as CSCL (computer supported collaborative learning), particularly those working within a tertiary education environment. It includes articles of relevance to those interested in both theory and practice in this area. It attempts to answer such important current questions as: how can groups with shared goals work collaboratively using the new technologies? What problems can be expected and what are the benefits? In what ways does online group work differ from face-to-face group work? And what implications are there for both educators and students seeking to work in this area. *Learning and Teaching with Technology in the Knowledge Society* Mizuho Inuma, 2015-11-24 This book discusses learning and teaching with modern technology in the new knowledge society. It focuses specifically on new literacy and technology in classroom environments. Based on a social constructivist approach, this book covers a wide range of new technology use examples such as participatory media, video recording systems, and 3D computer graphics. A case study on a constructivist approach to teaching and learning, especially CSCL (computer supported collaborative learning), is discussed from a practical perspective for educators. It also includes specific in-class practices with detailed accounts of curricula featuring readily accessible yet new technology available for classroom use such as Google Sketchup 3D computer models. *Collaborative Learning: Underlying Processes and Effective Techniques* Kris Bosworth, Sharon J.
