Coded Modulation Systems:

Coded Modulation Systems John B. Anderson, Arne Svensson, 2006-04-11 Coded Modulation Systems is an introduction to the subject of coded modulation in digital communication. It is designed for classroom use and for anyone wanting to learn the ideas behind this modern kind of coding. Coded modulation is signal encoding that takes into account the nature of the channel over which it is used. Traditional error correcting codes work with bits and add redundant bits in order to correct transmission errors. In coded modulation, continuous time signals and their phases and amplitudes play the major role. The coding can be seen as a patterning of these quantities. The object is still to correct errors but more fundamentally it is to conserve signal energy and bandwidth at a given error performance. The book divides coded modulation into three major parts. Trellis coded modulation (TCM) schemes encode the points of QAM constellations; lattice coding and set partition techniques play major roles here. Continuous phase modulation (CPM) codes encode the signal phase and create constant envelope RF signals. The partial response signaling (PRS) field includes intersymbol interference problems, signals generated by real convolution and signals created by lowpass filtering. In addition to these topics, the book covers coding techniques of several kinds for fading channels, spread spectrum, and repeat request systems. The history of the subject is fully traced back to the formative work of Shannon in 1949. Full explanation of the basics and complete homework problems make the book ideal for self study or classroom use.

Trellis coded modulation (TCM) is a known technique to increase the data rate without increasing the channel bandwidth when implementing error correction coding. TCM is a combination of M-ary modulation and error correction coding. This thesis investigates the performance of a low spectral efficiency TCM system which is compared with three alternative systems having comparable bandwidth. The three alternative systems are all non-TCM systems and consist of QPSK with independent $r = 1, 2$ error correction coding on the in-phase and quadrature components, 8-ary biorthogonal keying (8-BOK) with $r = 2, 3$ error correction coding, and 16-BOK with $r = 3, 4$ error correction coding. The effects of both additive white Gaussian noise (AWGN) and pulse noise interference (PNI) are considered. The TCM system shows much better than expected performance and significant resistance to PNI, and performance improves as the number of memory elements increases. The alternative QPSK system with soft decision decoding (SDD) experiences significant degradation with PNI. The 8-BOK with $r = 2, 3$ error correction and 16-BOK with $r = 3, 4$ error correction systems occupy approximately the same bandwidth as the TCM system and show better performance in PNI than the alternative QPSK system. Evans, 1988 *Multidimensional Trellis Coded Modulation for MC-CDMA Systems* Roseline Nyongarwizi Akol, 2001 **Coded Modulation for Power-Line Communication Channel** Khmaies Ouahada, 2012-03 Developments in digital communications occur at a very rapid pace High speed communications operate preferably in fixed connection through fiber optic means Since this type of communication is quite costly to implement even in developed countries the power line infrastructure through which every household is connected to the power grid at low voltages could be used as a communication medium since it uses an existing infrastructure The quality of the transmission over power lines depends amongst others on the noise level at the receiver and the attenuation of the electrical signal at different frequencies The higher the noise level the harder it is to detect the received signal The use of spectral shaping and distance preserving mappings techniques to design new codes and then combine them with certain modulation schemes produce a new class of codes with better error correction capability and better spectrum shape These codes can make use of the Viterbi decoding algorithm in a very harsh environment like the power line communication channel Development of Coded Modulation Techniques for the Mobile Radio Environment Reyat Yilmaz, 1993
