Pollock,1995 A sequel to the author's *How to Build a Person* this work builds upon that theoretical groundwork for the implementation of rationality through artificial intelligence It argues that progress in AI has stalled because of its creators reliance upon unformulated intuitions about rationality Instead the author bases the OSCAR architecture upon an explicit philosophical theory of rationality encompassing principles of practical cognition epistemic cognition and defeasible reasoning One of the results is the first automated defeasible reasoner capable of reasoning in a rich logical environment

*Contemporary Theories of Knowledge* John L. Pollock,Joseph Cruz,1999-03-18 This exciting new edition of the classic *Contemporary Theories of Knowledge* has been significantly updated to include analyses of the recent literature in epistemology In addition a new case is made for the

strong connection between epistemology and artificial intelligence as Pollock and Cruz argue that a necessary condition for the correctness of any epistemological theory is that it be possible to build an implemented artificial intelligence system on the basis of it Like the first edition Contemporary Theories of Knowledge Second Edition is an excellent teaching tool introducing the reader to the fundamental issues and approaches in the field of epistemology [The Oxford Handbook of Thinking and Reasoning](#) Keith J. Holyoak, Ph.D., Robert G. Morrison, Ph.D., 2012-04-19 The Oxford Handbook of Thinking and Reasoning brings together the contributions of many of the leading researchers in thinking and reasoning to create the most comprehensive overview of research on thinking and reasoning that has ever been available Each chapter includes a bit of historical perspective on the topic and concludes with some thoughts about where the field seems to be heading *The Publishers' Trade List Annual* ,1995 **The Philosophical Review** Jacob Gould Schurman, James Edwin Creighton, Frank Thilly, Gustavus Watts Cunningham, 2002 **Philosophy of Mind** World Congress of Philosophy, 2000 **Mind** ,1997 Issues for 1896 1900 contain papers of the Aristotelian Society *Frames of Reference and Direct Manipulation Based Navigation* Asaf Friedman, 2005 The analysis showed that the lack of realism of these systems means that they do not offer a sense of reality because of the user's inability to interact easily with the computer to navigate among represented objects The user cannot 1 Plan a course from a given location to a desired one 2 Shift the direction of their gaze and focus attention to objects as they move across a path 3 Move around an object keeping track of this change in relation to the surrounding objects 4 Turn an object in front of the viewer in order to examine it This lack of sense of reality cannot be simply improved by adding attributed to the system that are more realistic details shadows and reflections **AI Magazine** ,1995 [Choice](#) ,1995 **International Bibliography of Book Reviews of Scholarly Literature Chiefly in the Fields of Arts and Humanities and the Social Sciences** ,1999 [Bibliographie Internationale Des Recensions de la Litt Érature Savante](#) ,1997 *Intelligent Systems Report* ,1995 **The Times Index** ,1996 Indexes the Times Sunday times and magazine Times literary supplement Times educational supplement Times educational supplement Scotland and the Times higher education supplement **In Two Minds** Jonathan St. B. T. Evans, Keith Frankish, 2009 This book explores the idea that we have two minds one that is automatic unconscious and fast the other controlled conscious and slow In recent years there has been great interest in so called dual process theories of reasoning and rationality According to dual process theories there are two distinct systems underlying human reasoning an evolutionarily old system that is associative automatic unconscious parallel and fast and a more recent distinctively human system that is rule based controlled conscious serial and slow Within the former processes are held to be innate and to use heuristics which evolved to solve specific adaptive problems In the latter processes are taken to be learned flexible and responsive to rational norms Despite the attention these theories are attracting there is still poor communication between dual process theorists themselves and the substantial bodies of work on dual processes in cognitive psychology and social psychology remain isolated from each other This book brings together

leading researchers on dual processes to summarize the state of the art highlight key issues present different perspectives explore implications and provide a stimulus to further work It includes new ideas about the human mind both by contemporary philosophers interested in broad theoretical questions about mental architecture and by psychologists specialising in traditionally distinct and isolated fields For all those in the cognitive sciences this is a book that will advance dual process theorizing promote interdisciplinary communication and encourage further applications of dual process approaches
