## **Cytokine Interactions And Their Control:**

**Cytokine Interactions and Their Control** A. Baxter, R. Ross, Cytokine Interactions and Their Control A. Baxter, Russell Ross, British Society for Immunology, 1991-12-20 Written by a group of international experts with the intention of furthering the understanding of cytokines progress in recent years Coverage includes new cytokines continually being cloned plus recent studies of their interaction and control *Cytokines, Part A* C. Bondy, D. LeRoith, 1997-04-18 Progress in molecular technology in recent years has caused an amazing growth of information about intercellular peptide messengers and their receptors The number of characterized interleukins for example numbered just three six years ago and now there are at least 16 In addition the number of described neutrophilic peptides is around 30 and the number of receptors is ever increasing Because many of these new peptide ligands and receptors were identified by reverse genetic techniques the understanding of their biological roles falls behind the knowledge of their molecular structures However a new strain of functional studies has begun and animal models are developed allowing for further research into the biological roles of these messenger peptides and their receptors Cytokines the theme of this volume describes a group of proteins identified primarily within the immune and hematopoietic systems As many cytokines as possible are included along with their receptors providing the reader with a guide to an ever changing field of scientific research **Bacteria-cytokine Interactions in Health and Disease** Brian Henderson, Stephen Poole, Michael Wilson, 1998 This volume brings together the current literature on bacterial virulence and on cytokines to produce a synthesis that attempts to explain how infectious and commensal bacteria interact with man An explanation is provided for this failure to respond to normal microflora The Cytokine Factsbook Robin E. Callard, A. J. H. Gearing, 1994 How do you keep track of basic information on the proteins you work with Where do you find details of their physicochemical properties amino acid sequences gene organization Are you tired of scanning review articles primary papers and databases to locate that elusive fact The Academic Press FactsBook series will satisfy scientists and clinical researchers suffering from information overload Each volume provides a catalogue of the essential properties of families of molecules Gene organization amino acid sequences physicochemical properties and biological activity are presented using a common easy to follow format Taken together they compile everything you wanted to know about proteins but were too busy to look for More than 45 entries on human and murine cytokines and their receptors including Cytokine receptor superfamilies Interleukins 1 15 Other cytokines Additional information is provided on Alternative nomenclature Cross reactivity Sources Bio assays Physicochemical properties of the cytokines and their receptors 3 D structure Gene structure and chromosomal localisation Amino acid sequences of the cytokines and their receptors Receptors Receptor distribution Signal transduction Chromosomal location of the receptors References **Cytokines in Hemopoiesis, Oncology, and AIDS** Mathias Freund, Hartmut Link, Karl Welte, 2012-12-06 The clinical and experimental effects of cytokines have been realized for a long time The clinical effects of tumor necrosis factor were noted almost 100

years ago The basic biological effects of interferons and the hemopoietic growth factors have been known for more than 20 years Given the basis of modern molecular biotechniques information concerning the mediators of cellular interactions is expanding almost exponentially New principles in the regulation of cell growth microenvironment immune response and malignancy are being discovered right now New therapeutic options are becoming available and have in some areas already crossed the threshold of clinical application However the way forward might be more complicated than we are in a position to recognize today Some of the first optimistic expectations have not yet been fulfilled Nevertheless we are experiencing a revolution in medicine To contribute to this process and to stimulate scientific communication in this field we have initiated the international symposia on cytokines in hemopoiesis oncology and AIDS Major contributions from the first symposium are published in this book We thank all the authors for their contributions particularly those from the Hannover Medical School who have worked hard to realize the congress and prepare these proceedings We also thank the pharmaceutical companies whose support made this book possible Finally we thank Professors Deicher Poliwoda and Riehm heads of the Departments of Hematology and Oncology Immunology and Pediatric Hematology and Oncology respectively who encouraged us and gave us their firm support

*The Cytokine Handbook* Angus W. Thomson, 1994 This Second Edition of *The Cytokine Handbook* contains new chapters on recently characterized cytokines not previously covered in the First Edition The text continues to expand the coverage of specific cytokines serving as a valuable resource tool for immunologists pathologists and cancer cell biologists

**General and Molecular Pharmacology** Francesco Clementi, Guido Fumagalli, 2015-08-10 With a focus on functional relationships between drugs and their targets this book covers basic and general pharmacology from a cellular and molecular perspective with particular attention to the mechanisms of drug action the fundamental basis for proper clinical use without neglecting clinical application toxicology and pharmacokinetics Covers cell and molecular pharmacology bringing together current research on regulation of drug targets at a level appropriate for advanced undergrad and graduate students Discusses the relevance of pharmacokinetics and drug development for the clinical application of drugs Presents material from the perspective of drug targets and interaction the theoretical basis of drug action analysis and drug properties Focuses on structure function relationships of drug targets informing about their biochemical and physiologic functions and experimental and clinical pathways for drug discovery and development Has a companion website that offers a host of resources short additional chapters about methodology topics at the forefront of research and all figures and tables from the book

[Aging and Cellular Defense Mechanisms](#) Claudio Franceschi, 1992 This volume shows how defence mechanisms such as DNA repair production of heat shock and other stress proteins enzymatic and non enzymatic antioxidant defence systems and poly ADP ribose polymerase activation constitute an integrated network of critical importance for the aging process There is an emphasis on growth factor deprivation and programmed cell death and on the nervous and immune systems in the framework of a molecular biology approach
