## Dual Restructuring:

*Privatization and Entrepreneurship* Arie H. Ullmann, Alfred Lewis, 1997 *Privatization and Entrepreneurship: The Managerial Challenge in Central and Eastern Europe* analyzes the challenges faced by managers in the transforming economies of Central and Eastern Europe and provides penetrating insights into the details of managing in the former socialist countries. This collection's combination of conceptual/theoretical material with empirical first-hand case analysis prepares Western managers for a more profitable and less stressful entry into these significant markets. This enlightening book highlights the complexity and breadth of the issues and problems of successfully entering new markets in Central and Eastern Europe. Along the way you are introduced to such topics as consumer behavior and shown the different forms of foreign direct investment with their associated problems and benefits. If you are searching for ways to better prepare for business in these markets, this book can help you meet your objectives with its helpful information on ethical concerns and linguistic difficulties of managing in transforming economies, management challenges of privatization, management challenges of entrepreneurship, strategic issues associated with the reorientation of enterprises, corporate constituencies, changing consumers, labor unions, and pay practices. *Privatization and Entrepreneurship* will prove valuable to policymakers in economic development and foreign aid agencies, executives of companies planning to expand into Europe and those already active in the region, and academicians and students in management, economics, and political science.

*Modeling Foundations of Economic Property Rights Theory* Vesna Pasetta, 2006-03-30 This is an introduction to the foundations of economic property rights theory (EPRT). In this volume, a first step in the EPRT research program, rules concerning economic property rights between entrepreneurial agreements and enterprises are discussed. Introduced concept of EPRT is an extension of the traditional concept of pairing of residual rights of control and residual rights of returns in the economic theory. Its importance in economics is generated from a general impossibility of making a complete contract concerning EPRT for any nontrivial economic transaction. The volume offers a theoretical tension of mathematical economics applying recent results of Hopf algebras, quasi-Hopf algebras, representation theory, theory of categories, and deformation theories in looking for suitable mathematical methodology of economic property rights theories and foundations of general theory of economic agreements. The idea is to construct a kind of mathematical application in which any fundamental formal entity and/or operation has an empirical economic interpretation. This approach is seen as a way to cope with an extreme complexity of economic phenomena under consideration and requests for precise formulation of models where meaningful answers and solutions of problems are only those which are obtained rigorously. The proposed extensions in mathematical economics and property rights theory are to provide rich enough foundations to follow complexity of economic property rights in the exact way and to identify where there is an appropriate method providing a suitable solution and also to find problems where in general there is no such methodology.
