Beginning Algebra Charles P. McKeague, Alan Wise, 1994 Beginning Algebra: Connecting Concepts Through Applications Mark Clark, Cynthia Anfinson, 2012-12-19 BEGINNING ALGEBRA CONNECTING CONCEPTS THROUGH APPLICATIONS shows students how to apply traditional mathematical skills in real world contexts The emphasis on skill building and applications engages students as they master algebraic concepts problem solving and communication skills Students learn how to solve problems generated from realistic applications instead of learning techniques without conceptual understanding The authors have developed several key ideas to make concepts real and vivid for students First they emphasize strong algebra skills These skills support the applications and enhance student comprehension Second the authors integrate applications drawing on realistic data to show students why they need to know and how to apply math The applications help students develop the skills needed to explain the meaning of answers in the context of the application Third the authors develop key concepts as students progress through the course For example the distributive property is introduced in real numbers covered when students are learning how to multiply a polynomial by a constant and finally when students learn how to multiply a polynomial by a monomial These concepts are reinforced through

applications in the text. Last, the authors' approach prepares students for intermediate algebra by including an introduction to material such as functions and interval notation as well as the last chapter that covers linear and quadratic modeling.

**Beginning Algebra** Margaret L. Lial, Charles David Miller, 1980-01-01     **Beginning Algebra** Oiyin Pauline Chow, Professor, Andrea Hendricks, 2012-01-09

Today's Developmental Math students enter college needing more than just the math, and this has directly impacted the instructor's role in the classroom. Instructors have to teach to different learning styles within multiple teaching environments and to a student population that is mostly unfamiliar with how to be a successful college student. Authors Andrea Hendricks and Pauline Chow have noticed this growing trend in their combined 30 years of teaching at their respective community colleges, both in their face-to-face and online courses. As a result, they set out to create course materials that help today's students not only learn the mathematical concepts but also build life skills for future success. Understanding the time constraints for instructors, these authors have worked to integrate success strategies into both the print and digital materials so that there is no sacrifice of time spent on the math. Furthermore, Andrea and Pauline have taken the time to write purposeful examples and exercises that are student-centered, relevant to today's students, and guide students to practice critical thinking skills.

**Beginning Algebra** and its supplemental materials, coupled with ALEKS or Connect Math Hosted by ALEKS, allow for both full-time and part-time instructors to teach more than just the math in any teaching environment without an overwhelming amount of preparation time or even classroom time.
