**Protocols by Invariants** Anneke A. Schoone, 2004-08-19 Algorithms are a set of rules that specify a sequence of actions to be taken to solve a problem Distributed algorithms which are designed to solve many problems at once are conceptually far more complex than algorithms in a single processing unit environment When the number of simultaneous events becomes large human minds cannot keep track of all of them Naturally it is necessary to know whether a distributed algorithm will have the desired effect In this book Dr Schoone discusses assertational verification by system wide invariants for use in verifying the behavior of distributed algorithms The approach is entirely pragmatic the author considers many different examples over a wide range of algorithms and protocols This volume will be an essential purchase for all those with an interest in distributed algorithms
