

# Notes on the AP Biology Practice Exam

## Multiple-Choice Section

### Course Framework Alignment and Rationales

#### Question 1

Skill	Learning Objective	Topic
1.A: Describe biological concepts and/or processes.	SY1-1.B: Describe the properties of the monomers and the type of bonds that connect the monomers in biological macromolecules.	Introduction to Biological Macromolecules
(A)	Incorrect. The removal of water is not involved in breaking the bond between sugar monomers.	
(B)	Incorrect. Hydrolysis of carbohydrates does not result in the formation of bonds between sugar molecules. Additionally, it does not involve the removal of a water molecule.	
(C)	<b>Correct.</b> The hydrolysis of carbohydrates involves the addition of a water molecule, which breaks the covalent bond between monomers.	
(D)	Incorrect. Although hydrolysis does involve the addition of a water molecule, hydrolysis does not result in the formation of bonds between sugar molecules.	

#### Question 2

Skill	Learning Objective	Topic
1.A: Describe biological concepts and/or processes.	IST-1.L: Describe the characteristics of DNA that allow it to be used as the hereditary material.	DNA and RNA Structure
(A)	Incorrect. There are only four different types of nucleotide bases that can be incorporated and the number of types doesn't contribute to its usefulness as hereditary material.	
(B)	Incorrect. Although nucleotide bases could be metabolized to provide energy, this would not help maintain the sequence of bases making it useful as hereditary material.	
(C)	Incorrect. The random replacement of nucleotide bases in a DNA molecule would destroy the information contained in the sequence.	
(D)	<b>Correct.</b> The pairing of specific bases allows one strand to be used as a template for replicating the other strand, ensuring that DNA can be replicated with a relatively high accuracy.
