## **Apes And Primates:**

*The Great Apes* Chris Herzfeld, 2017-11-14 A unique beautifully illustrated exploration of our fascination with our closest primate relatives and the development of primatology as a discipline This insightful work is a compact but wide ranging survey of humankind s relationship to the great apes chimpanzees bonobos gorillas orangutans from antiquity to the present Replete with fascinating historical details and anecdotes it traces twists and turns in our construction of primate knowledge over five hundred years Chris Herzfeld outlines the development of primatology and its key players and events including well known long term field studies notably the pioneering work by women such as Jane Goodall Dian Fossey and Birut Galdikas Herzfeld seeks to heighten our understanding of great apes and the many ways they are like us The reader will encounter apes living in human families painting apes apes who use American Sign Language and chimpanzees who travelled in space A philosopher and historian specializing in primatology Herzfeld offers thought provoking insights about our perceptions of apes as well as the boundary between human and ape and what it means to be either

[Apes, Monkeys, Children, and the Growth of Mind](#) Juan Carlos Gómez, 2009-07 What can the study of young monkeys and apes tell us about the minds of young humans In this fascinating introduction to the study of primate minds Juan Carlos G mez identifies evolutionary resemblances and differences between human children and other primates He argues that primate minds are best understood not as fixed collections of specialized cognitive capacities but more dynamically as a range of abilities that can surpass their original adaptations In a lively overview of a distinguished body of cognitive developmental research among nonhuman primates G mez looks at knowledge of the physical world causal reasoning including the chimpanzee like errors that human children make and the contentious subjects of ape language theory of mind and imitation Attempts to teach language to chimpanzees as well as studies of the quality of some primate vocal communication in the wild make a powerful

case that primates have a natural capacity for relatively sophisticated communication and considerable power to learn when humans teach them G me z concludes that for all cognitive psychology s interest in perception information processing and reasoning some essential functions of mental life are based on ideas that cannot be explicitly articulated Nonhuman and human primates alike rely on implicit knowledge Studying nonhuman primates helps us to understand this perplexing aspect of all primate minds

**A Complete Guide to Monkeys, Apes and Other Primates** Michael Kavanagh,1984 **Primates** Kurt Benirschke,2012-12-06 This conference represents the first time in my life when I felt it was a misfortune rather than a major cause of my happiness that I do conservation work in New Guinea Yes it is true that New Guinea is a fascinating microcosm it has fascinating birds and people and it has large expanses of undisturbed rainforest In the course of my work there helping the Indonesian government and World Wildlife Fund set up a comprehensive national park system I have been able to study animals in areas without any human population But New Guinea has one serious drawback it has no primates except for humans Thus I come to this conference on primate conservation as an underprivileged and emotionally deprived observer rather than as an involved participant Nevertheless it is easy for anyone to become interested in primate conservation The public cares about primates More specifically to state things more realistically many people care some of the time about some primates Primates are rivaled only by birds pandas and the big cats in their public appeal For some other groups of animals the best we can say is that few people care about them infrequently For most groups of animals no one cares about them ever

in Asia rather than Africa In *The Hunt for the Dawn Monkey* Beard chronicles the saga of two centuries of scientific exploration in search of anthropoid origins from the early work of Georges Cuvier the father of paleontology to the latest discoveries in Asia Africa and North America's Rocky Mountains Against this historical backdrop he weaves the story of how his own expeditions have unearthed crucial fossils including the controversial primate *Eosimias* that support his compelling new vision of anthropoid evolution The only book written for a wide audience that explores this remote phase of our own evolutionary history *The Hunt for the Dawn Monkey* adds a fascinating new chapter to our understanding of humanity's relationship to the rest of life on earth
