**Merger Control in Europe** Ioannis Kokkoris, 2010-09-13 This book addresses the phenomenon of mergers that may result in non coordinated effects in oligopolistic markets Such cases are sometimes referred to as non collusive oligopolies or gap cases and there is a concern that they might not be covered by the substantive test that some Member States use for merger assessment Ioannis Kokkoris examines the argument that the European Community Merger Regulation Regulation 4064/89 did not capture gap cases and considers the extent to which the revised substantive test in Regulation 139/2004 deals with the problem of non collusive oligopolies The author identifies actual examples of mergers that gave rise to a problem of non coordinated effects in oligopolistic markets both in the EU and in other jurisdictions and analyses the way in which these cases were dealt with in practice The book considers legal systems such as United Kingdom United States Australia and New Zealand The book investigates whether there is any difference in the assessment of non collusive oligopolies between the various substantive tests which have been adopted for merger assessment in various jurisdictions The book also looks at the various methodological tools available to assist competition authorities and the professional advisers of merging firms to identify whether a particular merger might give rise to anticompetitive effects and explores the type of market structure in which a merger is likely to lead to non coordinated effects in oligopolistic markets

*Best Practice Approaches for Mixed Methods Research in Psychological Science, volume II* Gudberg K. Jonsson,Mariona Portell,M. Teresa Anguera,José Luis Losada,Judith Schoonenboom,2025-10-27

Having started as a small movement in the 1980 s the study of mixed methods research burst onto the scene around the beginning of the second millennium After decades of intense dispute between supporters of the qualitative perspective and their quantitative counterparts with both sides having grown deeply entrenched in their respective views a complementary approach promising the possibility of integration had finally been proposed By that time however the vast majority of researchers had committed to one stance or the other very few of us argued that the two approaches could be complementary Since then the number of publications scientific meetings and other activities devoted to the mixed methods approach has increased exponentially throughout the world At a substantive level we are pleased to see that a growing number of fields are generating mixed

methods research and we are eager to assist in promoting this trend But naturally the field has experienced some growing pains a certain degree of heterogeneity in terms of approaches differences of opinion regarding certain conceptualizations for example mixed methods vs multimethods numerous design taxonomies multiple ways of integrating qualitative and quantitative elements and various positions on how best to overcome the enduring lack of symmetry between qualitative and quantitative aspects The methodological and substantive spectrum is vast and broad possibly because the mixed methods approach has become obligatory for much research not only in psychology but in practically all branches of the social sciences
