Computer Fundamentals B. Ram, 2000 **Programming in C** Lawrence H. Miller, Alexander E. Quilici, 1986 From this book readers will learn how to use the C programming language to write correct efficient portable programs. The emphasis is on complete interesting useful examples while covering the complete C language. Modern topics of data and functional abstraction reusable code and portable efficient data structures are covered. Distributed Application Programming in C++ Randall A. Maddox, 2000 Industrial strength code examples strategies and conventions for software engineering with C and UNIX Linux. Make the most of advanced C features powerful techniques key tradeoffs. CD ROM contains all of the book's real world enterprise proven code. As software becomes increasingly distributed high quality infrastructure becomes ever more important. Precisely written replete with advanced code examples and based on Randall Maddox extensive experience teaching advanced C this book gives working C developers the insights and sophisticated techniques they need to build superior software infrastructure. Maddox begins by introducing the context required to support a distributed Web application in a Unix environment. He then presents the utility classes that illustrate crucial design and implementation issues and serve as building blocks for a distributed software architecture. Coverage includes concrete data types templates containers namespaces error handling and an automated solution for the hazards of dynamic memory allocation. Maddox reviews C program startup and memory usage in detail laying the groundwork for a full understanding of multiprocessing multithreading and interprocess communication. Unlike most advanced C books Distributed Application Programming in C goes beyond coding introducing superior strategies for enterprise software development. Maddox presents key design implementation tradeoffs managing source code organization build time issues the run time environment and more. For all professional developers who want to master the use of advanced C features in real world distributed applications. **The National Guide to Educational Credit for Training Programs**, 2000 NASA Tech Briefs, 1991-07 Application Programming in Structured C James L. Antonakos, 1997-01 The objective of this book is to describe the C programming language to the non programmer. Supports all coverage with a wealth of figures that provide graphic representations of topics under discussion. Offers a companion diskette containing the C source code files for all programs found in the book. Examines all of the essential tools and techniques of programming loops calculations formatting I/O etc in over 300 tested and working programs each compiled and executed with three different compilers to help ensure accuracy. Includes coverage of advanced topics such as recursion the 80x86 architecture memory models assembly language concepts converting C source code to assembly language printer controller application program and compiling multiple source files with MAKE. Guide to Application Programs in Basic Robert John Greene, 1991 A guide to more than 3500 application programs in Basic from over 200 collections. The book lists the contents of specific collections and indexes programs by key word and by

subject The software programs listed are intended to solve specific problems or simulate experiments
