Applications Of Super Critical Fluids In Industrial Analysis:

Applications of Supercritical Fluids in Industrial Analysis J.R. Dean, 2012-12-06 The continued search for rapid efficient and cost effective means of analytical measurement has introduced supercritical fluids into the field of analytical chemistry Two areas are common supercritical fluid chromatography and supercritical fluid extraction Both seek to exploit the unique properties of a gas at temperatures and pressures above the critical point The most common supercritical fluid is carbon dioxide employed because of its low critical temperature 31 C inertness purity non toxicity and cheapness Alternative supercritical fluids are also used and often in conjunction with modifiers The combined gas like mass transfer and liquid like solvating characteristics have been used for improved chromatographic separation and faster sample preparation Supercritical fluid chromatography SFC is complementary to gas chromatography GC and high performance liquid chromatography HPLC providing higher efficiency than HPLC together with the ability to analyse thermally labile and high molecular weight analytes Both packed and open tubular columns can be employed providing the capability to analyse a wide range of sample types In addition flame ionization detection can be used thus providing universal detection
