Scharmann, 1981 **Radiation Detectors for Medical Applications** Stefaan Tavernier, Alexander Gektin, Boris Grinyov, William W. Moses, 2006-10-02 The topic of this book is the use of scintillating materials in the detection of ionising radiation for medical imaging The text surveys the state of the art in radiation detectors for medical imaging followed by an in depth review of all aspects of the use of scintillating materials Also included are detailed discussion of ways to improve the performance of existing scintillating materials and completely novel uses of scintillating materials Applied Dosimetry [by] K.K. Aglintsev [and Others], Konstantin Konstantinovich Aglintsev, 1965 Applied Physics of External Radiation Exposure Rodolphe Antoni, Laurent Bourgois, 2016-12-22 This book describes the interaction of living matter with photons neutrons charged particles electrons and ions The authors are specialists in the field of radiation protection The book synthesizes many years of experiments with external radiation exposure in the fields of dosimetry and radiation shielding in medical industrial and research fields It presents the basic physical concepts including dosimetry and offers a number of tools to be used by students engineers and technicians to assess the radiological risk and the means to avoid them by calculating the appropriate shields The theory of radiation interaction in matter is presented together with empirical formulas and abacus Numerous numerical applications are treated to illustrate the different topics The state of the art in radiation protection and dosimetry is presented in detail especially in the field of simulation codes for external exposure to radiation medical projects and advanced research Moreover important data spread in different up to date references are presented in this book The book deals also with accelerators X rays facilities sealed sources dosimetry Monte Carlo simulation and radiation regulation Each chapter is split in two parts

depending on the level of details the readers want to focus on The first part accessible to a large public provides a lot of simple examples to help understanding the physics concepts under radiation external exposure The second part called Additional Information is not mandatory it aims on explaining topics more deeply often using mathematical formulations The book treats fundamental radiometric and dosimetric quantities to describe the interaction in materials under the aspects of absorbed dose processes in tissues Definitions and applications on limited and operational radiation protection quantities are given An important aspect are practical engineering tools in industrial medical and research domains Source characterization and shielding design are addressed Also more exotic topics such as ultra intense laser and new generation accelerators are treated The state of the art is presented to help the reader to work with the book in a self consistent way The basic knowledge necessary to apply Monte Carlo methods in the field of radiation protection and dosimetry for external radiation exposure is provided Coverage of topics such as variance reduction pseudo random number generation and statistic estimators make the book useful even to experienced Monte Carlo practitioners Solved problems help the reader to understand the Monte Carlo process The book is meant to be used by researchers engineers and medical physicist It is also valuable to technicians and students
