#### Creation of small, accurate kinetic models for applications in computational fluid dynamics programs

Michael Angelo Calicchia,2021 Computational fluid dynamics simulations of chemically reacting flows which incorporate detailed kinetic models exhibit a very large computational expense which hinders the ability of these programs to be used as a design tool for combustion devices However this issue can be corrected by simplifying the chemistry and thus decreasing the size of the kinetic model Kinetic model reduction is an active area of research and this thesis adds to the literature by making further progress in developing a method capable of generating small accurate reduced kinetic models in an efficient

**Nonequilibrium Processes in the Planetary and Cometary Atmospheres: Theory and Applications** Mikhail Ya. Marov, V. Shematovich, D. Bisikalo, Jean-Claude Gérard, 1997-09-30 This book reviews the approach to the kinetic simulation of nonequilibrium processes in the planetary atmospheres which the authors developed and dealt with since the 1970s The results of this study which are focused on the nonequilibrium collisional processes in the atmospheres of planets and comets are thoroughly reviewed and discussed Many specific problems of atmospheric modeling involving numerical evaluation of aeronomic processes are addressed and compared with the available experimental data The kinetic approach proved to be especially effective to model the interaction of the incident shortwave solar radiation with the rarefied gas of planetary upper atmospheres It involves various processes of photolysis energetic electron impacts and accompanying numerous chemical reactions as well as processes occurring in the intermediate transition zones of planetary and cometary gas envelopes The underlying mathematical treatment is based on the stochastic approach for the solution of the Boltzmann type equation and implies the development of the efficient algorithms for its computer simulation Some results of this study were previously summarized in the monograph issued in Russian Marov et al 1990 and later in the review paper published in Space Science Reviews Marov et al 1996 The basic principles of stochastic simulation were first developed in the field of rarefied gas dynamics and were successfully applied to the solution of some engineering problems of aerodynamics and heat transfer

Hertog, 1998 *Metabolism in Cancer* Thorsten Cramer, Clemens A. Schmitt, 2016-08-24 This textbook presents concise chapters written by internationally respected experts on various important aspects of cancer associated metabolism offering a comprehensive overview of the central features of this exciting research field The discovery that tumor cells display characteristic alterations of metabolic pathways has significantly changed our understanding of cancer while the first description of tumor specific changes in cellular energetics was published more than 90 years ago the causal significance of this observation for the pathogenesis of cancer was only discovered in the post genome era The first 10 years of the twenty first century were characterized by rapid advances in our grasp of the functional role of cancer specific metabolism as well as the underlying molecular pathways Various unanticipated interrelations between metabolic alterations and cancer driving pathways were identified and currently await translation into diagnostic and therapeutic applications Yet the speed quantity and complexity of these new

discoveries make it difficult for researchers to keep up to date with the latest developments an issue this book helps to remedy
