Ab Program In Geometric Analysis Sharp Sobolev Inequalities And Related Problems:

The \$AB\$ Program in Geometric Analysis: Sharp Sobolev Inequalities and Related Problems Olivier Druet, Emmanuel Hebey, 2002 Function theory and Sobolev inequalities have been the target of investigation for many years Sharp constants in these inequalities constitute a critical tool in geometric analysis The AB programme is concerned with sharp Sobolev inequalities on compact Riemannian manifolds This text summarizes the results of contemporary research and gives an up to date report on the field [The AB Program in Geometric Analysis](#) Olivier Druet, F R Gantmakher, 2014-09-11 Euclidean background Statement of the AB program Some historical motivations The $H^{2,1}$ inequality Part I The $H^{2,1}$ inequality Part II PDE methods The isoperimetric inequality The $H^{p,1}$ inequalities 1 **Variational Problems in Riemannian Geometry** Paul Baird, Ahmad El Soufi, Ali Fardoun, Rachid Regbaoui, 2012-12-06 This book collects invited contributions by specialists in the domain of elliptic partial differential equations and geometric flows There are introductory survey articles as well as papers presenting the latest research results Among the topics covered are blow up theory for second order elliptic equations bubbling phenomena in the harmonic map heat flow applications of scans and fractional power integrands heat flow for the p energy functional Ricci flow and evolution by curvature of networks of curves in the plane *Noncompact Problems at the Intersection of Geometry, Analysis, and Topology* Abbas Bahri, Sergiu Klainerman, Michael Vogelius, 2004 This proceedings volume contains articles from the conference held at Rutgers University in honor of Haim Brezis and Felix Browder two mathematicians who have had a profound impact on partial differential equations functional analysis and geometry Mathematicians attending the conference had interests in noncompact variational problems pseudo holomorphic curves singular and smooth solutions to problems admitting a conformal or some group invariance Sobolev spaces on manifolds and configuration spaces One day of the proceedings was devoted to Einstein equations and related topics Contributors to the volume include among others Sun Yung A Chang Luis A Caffarelli Carlos E Kenig and Gang Tian The material is suitable for graduate students and researchers interested in problems in analysis and differential equations on noncompact manifolds **Analysis and Geometry of Markov Diffusion Operators** Dominique Bakry, Ivan Gentil, Michel Ledoux, 2013-11-18 The present volume is an extensive monograph on the analytic and geometric aspects of Markov diffusion operators It focuses on the geometric curvature properties of the underlying structure in order to study convergence to equilibrium spectral bounds functional inequalities such as Poincaré Sobolev or logarithmic Sobolev inequalities and various bounds on solutions of evolution equations At the same time it covers a large class of evolution and partial differential equations The book is intended to serve as an introduction to the subject and to be accessible for beginning and advanced scientists and non specialists Simultaneously it covers a wide range of results and techniques from the early developments in the mid eighties to the latest achievements As such students and researchers interested in the modern aspects of Markov diffusion operators and semigroups and their connections to analytic functional inequalities

probabilistic convergence to equilibrium and geometric curvature will find it especially useful Selected chapters can also be used for advanced courses on the topic

Blow-up Theory for Elliptic PDEs in Riemannian Geometry Olivier Druet, Emmanuel Hebey, Frédéric Robert, 2009-01-10 Elliptic equations of critical Sobolev growth have been the target of investigation for decades because they have proved to be of great importance in analysis geometry and physics The equations studied here are of the well known Yamabe type They involve Schrödinger operators on the left hand side and a critical nonlinearity on the right hand side A significant development in the study of such equations occurred in the 1980s It was discovered that the sequence splits into a solution of the limit equation a finite sum of bubbles and a rest that converges strongly to zero in the Sobolev space consisting of square integrable functions whose gradient is also square integrable This splitting is known as the integral theory for blow up In this book the authors develop the pointwise theory for blow up They introduce new ideas and methods that lead to sharp pointwise estimates These estimates have important applications when dealing with sharp constant problems a case where the energy is minimal and compactness results a case where the energy is arbitrarily large The authors carefully and thoroughly describe pointwise behavior when the energy is arbitrary Intended to be as self contained as possible this accessible book will interest graduate students and researchers in a range of mathematical fields

Handbook of Differential Equations: Stationary Partial Differential Equations Michel Chipot, 2011-08-11 This handbook is the sixth and last volume in the series devoted to stationary partial differential equations The topics covered by this volume include in particular domain perturbations for boundary value problems singular solutions of semilinear elliptic problems positive solutions to elliptic equations on unbounded domains symmetry of solutions stationary compressible Navier Stokes equation Lotka Volterra systems with cross diffusion and fixed point theory for elliptic boundary value problems Collection of self contained state of the art surveys Written by well known experts in the field Informs and updates on all the latest developments

Elliptic PDEs on Compact Ricci Limit Spaces and Applications Shouhei Honda, 2018-05-29 In this paper the author studies elliptic PDEs on compact Gromov Hausdorff limit spaces of Riemannian manifolds with lower Ricci curvature bounds In particular the author establishes continuities of geometric quantities which include solutions of Poisson's equations eigenvalues of Schrödinger operators generalized Yamabe constants and eigenvalues of the Hodge Laplacian with respect to the Gromov Hausdorff topology The author applies these to the study of second order differential calculus on such limit spaces

Pseudodifferential Analysis on Conformally Compact Spaces Robert Lauter, 2003 The \mathcal{O} calculus on a manifold with boundary is a micro localization of the Lie algebra of vector fields that vanish at the boundary It has been used by Mazzeo Melrose to study the Laplacian of a conformally compact metric

Mutually Catalytic Super Branching Random Walks: Large Finite Systems and Renormalization Analysis J. T. Cox, Jeff Groah, Donald Andrew Dawson, Andreas Greven, 2004 Studies the evolution of the large finite spatial systems in size dependent time scales and compare them with the behavior of the infinite systems which amounts to establishing the so called finite system scheme

This title introduces the concept of a continuum limit in the hierarchical mean field limit *Encyclopedia of Mathematical Physics* Jean-Pierre Francoise, Gregory L. Naber, Sheung Tsun Tsou, 2006 The Encyclopedia of Mathematical Physics provides a complete resource for researchers students and lecturers with an interest in mathematical physics It enables readers to access basic information on topics peripheral to their own areas to provide a repository of the core information in the area that can be used to refresh the researcher s own memory banks and aid teachers in directing students to entries relevant to their course work The Encyclopedia does contain information that has been distilled organised and presented as a complete reference tool to the user and a landmark to the body of knowledge that has accumulated in this domain It also is a stimulus for new researchers working in mathematical physics or in areas using the methods originating from work in mathematical physics by providing them with focused high quality background information Editorial Board Jean Pierre Fran oise Universit Pierre et Marie Curie Paris France Gregory L Naber Drexel University Philadelphia PA USA Tsou Sheung Tsun University of Oxford UK Also available online via ScienceDirect 2006 featuring extensive browsing searching and internal cross referencing between articles in the work plus dynamic linking to journal articles and abstract databases making navigation flexible and easy
