Advances in Therapeutic Engineering Wenwei Yu, Subhagata Chattopadhyay, Teik-Cheng Lim, U. Rajendra Acharya, 2012-12-03 Therapeutic Engineering TE is a cutting edge domain in today's era of medical technology research. Through engineering algorithms that provide technological solutions, it aims to elevate the quality of life of disabled individuals. *Advances in Therapeutic Engineering* describes various therapeutic processes and mechanisms currently applied to the field of healthcare in a range of areas including mobility, communications, hearing, vision, and mental health and cognition. The book explores research and advances in the areas of hand-eye coordination, motor function, the biomechanics of lower limbs, and treatment of spinal diseases and neural plasticity. It discusses electrical stimulation methodologies for improving human gait. It also examines prosthetic devices and assistive technology, induction heater based treatment, and inclusive user modelling and simulation. Additional chapters cover automated asthma detection using clinico-spirometric information, computer-aided diagnostic modules for malaria screening, and various data mining techniques that have been developed and successfully implemented in healthcare management. McBean, 2018-05-30 A guide to the methodologies, typical mathematical notation, and assumptions used in risk assessment calculations. *Risk Assessment* describes the methodologies, the math, and assumptions needed in risk assessment calculations and explores the various statistical analysis procedures that are used for estimating the parameters employed in risk assessment approaches. The author, a noted expert in the field, outlines a logical step-by-step approach to assessment: Identify a hazard, Analyze the risk associated with that hazard, and Determine if the elimination or control of the risk is warranted. The text puts the focus on assessing environmental risk and describes the basics used in hypothesis testing to determine when there are differences in environmental quality at various locations. The author describes statistical techniques in approachable terms that are designed to be understandable to the non-statistician. The text downplays mathematical notation while offering clear explanations for the development of equations. It highlights applications with numerous examples of problems of censored data as they influence the use of alternative tests. In addition, the text focuses on both parametric and non-parametric procedures. This important resource describes in understandable terms the methodologies, typical mathematical notation, and assumptions used in risk assessment calculations. Explores the fundamental calculation procedures and approaches for risk characterization. Contains a wealth of example problems of interpretations of environmental monitoring results and shows how each procedure is used. Includes problems at the end of each chapter that stress the fundamental concepts outlined. Written for senior undergraduate and graduate
