Scientific Inquiry Cycle: Review

Science helps us understand and solve problems by applying knowledge and creating things that help us live better. Each step in solving a problem is important. Using science to solve or improve problems can have a positive impact. Understanding the problem fully, including its causes and effects, is the first step in finding an effective solution.

Designing solutions requires considering various constraints, such as budget, time, and safety concerns. Constraints represent limits on what you can do. Challenges, however, are the obstacles that might limit your ability. For example, creating a solution for a water filter that is both safe and easy to use, cannot influence the effectiveness of the solution.

After identifying a solution, documenting how it works, what constraints affected it, and any compromises that have already been and should be made on the way. Communication, using simple words, and reflecting on the results of the solution are important steps. This process helps you identify areas that need further improvement, testing, and redesign.

6. Mark the best answer for each question.

6. What is the first important step when working on a local problem?
- Thinking of a solution
 - Using the most expensive materials
 - Ignoring safety concerns
 - Understanding the problem fully
7. What does documenting constraints in a solution help with?
- Ignoring the constraints of the solution
 - Establishing a budget and safety
 - Breaking the task into smaller parts
 - Documenting what the solution has achieved
8. Which is an example of a constraint?
- Working without any tools
 - Unknown time to finish the project
 - No access to resources
 - Choosing materials that can be reused
9. Why is it important to understand the problem fully?
- To avoid any safety concerns
 - To make the solution work
 - To understand the problem and its effects
 - To avoid unnecessary costs

12. Mark if the statement is True (T) or False (F).

1. A solution made after one failed attempt is always better than one made after several failed attempts.

Answer for each question.

1. Is a solution made after one failed attempt always better than one made after several failed attempts?

2. Why must this be considered in designing a solution?

3. What might happen when creating a solution that

4. How might science solutions be implemented?

5. Why are safety concerns essential in scientific understanding?
