Argon Laser Photocoagulation H. Christian Zweng, Hunter L. Little, 1977      **Symposium on Light-Coagulation** J. François, 2012-12-06 The purpose of this symposium on light coagulation is not to show the superiority of the argon laser coagulation or on the contrary of the classical photo coagulation but rather to see if possible which are the respective indications and contraindications for xenon arc coagulation as well as for argon laser coagulation So for instance the argon laser coagulator is perhaps more appropriate to treat the lesions at and around the macula and the optic disc but for the peripheral lesions of the retina the xenon arc photocoagulator is surely as effective For the conservative treatment of intraocular tumours the xenon arc coagulator is beyond doubt more efficacious than the argon laser coagulator We were very happy to have at this symposium Professor MEYER SCHWICKE RATH the creator and the pioneer of light coagulation his coworker Professor WESSING and Doctor HUNTER LITTLE one of the pioneers of the laser therapy We thank them very warmly for having brought to us the results of their prominent clinical experiments After general considerations on laser photocoagulation we will have a discussion on macular alterations and their treatment as well as on peripheral retinal vascular or non vascular diseases The most important part concerns the treatment of diabetic retinopathy Finally the prevention of complications in argon laser retinal photocoagulation will be reviewed      **Symposium on Light-Coagulation** J.
