Structure in Architecture (Classic Reprint) Leonard Michaels,2017-11-24 Excerpt from Contemporary Structure in

Architecture In this book I have endeavoured to bridge the gap between the way of thinking of architect and engineer a gap which must be bridged if architecture is to take full advantage of the revolutionary development of contemporary structure and not regard it merely as a means of taking greater liberties with the forms arising out of structural principles no longer employed I need not elaborate further upon the nature of the book since this is made clear in the Foreword and Postscript to the authors of which I am greatly indebted for their contributions I have found it convenient to first the complete range of contemporary structure in order to place in true perspective the architectural potentialities of structural materials and 2 structural vocabulary which confronts the architect to day The subsequent analysis of the effects and influence of contemporary structure on the trends of architectural design can then be followed with this structural vocabulary as a background drawing upon it as necessary for the illustration of developments and potentialities I should like here to meet one possible criticism This book is concerned with structural potentialities in relation to architectural design with what has been done and what can be done within the limits of reasonable economy An architect does not often seek the cheapest method of construction without having regard to other factors such as appearance maintenance durability etc and cost has therefore not been a criterion in selecting the structures illustrated for if it had been the scope of the book might have been much more limited I have also avoided as far as possible the question of relative cost since this is bound to vary not only from one country to another and from one locality to another but also from one decade to another or even from year to year On the other hand I have endeavoured to indicate methods of economising in material which if not always leading to an overall saving in cost at the present time seem to provide a sound basis for seeking economy About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections

Model Perspectives: Structure, Architecture and Culture Mark R. Cruvellier,Bjorn N. Sandaker,Luben Dimcheff,2017-09-25 This book contains a unique collection of various perspectives on the relationship between structures and the forms and spaces of architecture As such it provides students and professionals alike with an essential sourcebook that can be mined for visual inspiration as well as for textually rich and authoritative insight into the links between structure architecture and cultural context The chapters address fundamental structural elements and systems columns walls beams trusses frames tensile structures arches domes and shells Each chapter is subdivided into two parts The essays introduce the chapters with the reprinting of a curated set of essays and excerpts by various authors that uniquely address how particular structural elements or systems relate in essential fashion to architectural design concepts The model studies physical models of the overall structural systems of several notable contemporary buildings from Europe North and South America Africa and Asia are illustrated with large photographs detail close ups and views of their external forms and internal spaces that establish the exceptional qualities of these projects in connecting structural form to architectural design objectives Mosaic layouts complete the chapters with a collection of photographs of yet more models whose particular details and unique features serve to extend the visual repertoire of the structural type being considered The combination juxtaposition and mutual positive reinforcement of these two collections one largely textual and the other image based provides the reader

with unique and multifaceted insights into how structural forms and systems can be related to architectural design intentions. Conveyed by a strong and deliberate graphical design format, this assembly of materials gets to the very essence of structures within the context of architecture and will inspire students and practitioners alike to make strategic design decisions for their own projects.

Contemporary Structure in Architecture. (1950) 2nd Pr L. Michaels, 1951 **Translucent Building Skins** Scott Murray, 2013-05-07 Exploring the design of innovative building enclosure systems or skins in contemporary architecture and their precedents in earlier twentieth century modern architecture, this book examines the tectonics, the history, and the influence of translucency as a defining characteristic in architecture. Highly illustrated throughout with drawings and full colour photographs, the book shows that translucency has been and continues to be a fertile ground for architectural experimentation. Each chapter presents a comparative analysis of two primary buildings: a recent project paired with a historical precedent, highlighting how architects in different eras have realized the distinctive effects of translucency. The included buildings span a variety of program types ranging from a single family residence to a factory to a synagogue. Whether it is Pierre Chareau's glass lens curtain wall at the Maison de Verre, Frank Lloyd Wright's wall of stacked glass tubes at the Johnson Wax Research Tower, or Peter Zumthor's use of acid etched glass in a double skin envelope at the Kunsthaus Bregenz, the included projects each offer an exemplary case study of innovations in materiality and fabrication techniques. Today, among many contemporary architects, there is an engagement with new technologies, new material assemblies, and new priorities such as sustainability and energy efficiency. A resurgent interest in translucency as a defining quality in buildings has been an important part of this recent dialogue, and this book makes essential reading for any architect looking to incorporate aspects of translucency into their buildings.

Structural Design of Lightweight Architecture Joshua Schultz, Christian Stutzki, 2026-01-22 This survey of lightweight specialty structures provides in depth case studies supplemented with technical guidance and an overview of fundamental theories. Drawing on almost 75 years of combined professional and academic experience, the authors guide readers through the design of lightweight systems: space frames, grid shells, cable nets, ethylene tetrafluoroethylene (ETFE) membranes, rails, stairs, and canopies. Each chapter provides an overview of the evolution of each system and provides technical references for further study. Images, details, and calculations from 18 actual projects showcase the process of design and the importance of close collaboration among all members of the project team. These case studies include a discussion of design intent, analysis methods, architectural constraints, detailing, fabrication, and construction methods. Because lightweight structures blur the lines between architecture, engineering, and fabrication, care is taken to share key lessons learned from over half a century of firsthand design. These topics can be highly technical and broadly extensive, and this book serves as a tractable introduction for designers. Written for structural architecture students and early career professionals, this book is an essential introduction to the fundamentals of each lightweight structural system.
