Glidewell,1977   **Context and Learning** P. Balsam,A. Tomie,2014-01-14 First published in 1984 The effects of contextual stimuli on the performance of conditioned behaviors have recently become the object of intense theoretical and empirical scrutiny This book presents the work of researchers who have attempted to characterize the role of context in learning through direct experimental manipulation of these stimuli Their work reveals that context has important and systematic effects upon the learning and performance of conditioned responses The roles played by context are diverse and the problems confronted in attempting to evaluate and differentiate contextual functions are formidable These considerations are discussed in the introductory chapter The remaining chapters present an analysis of the role of context in Pavlovian operant and discrimination learning paradigms

AI Engineering Chip Huyen,2024-12-04 Recent breakthroughs in AI have not only increased demand for AI products they ve also lowered the barriers to entry for those who want to build AI products The model as a service approach has transformed AI from an esoteric discipline into a powerful development tool that anyone can use Everyone including those with minimal or no prior AI experience can now leverage AI models to build applications In this book author Chip Huyen discusses AI engineering the process of building applications with readily available foundation models The book starts with an overview of AI engineering explaining how it differs from traditional ML engineering and discussing the new AI stack The more AI is used the more opportunities there are for catastrophic failures and therefore the more important evaluation becomes This book discusses different approaches to evaluating open ended models including the rapidly growing AI as a judge approach AI application developers will discover how to navigate the AI landscape including models datasets evaluation benchmarks and the seemingly infinite number of use cases and application patterns You ll learn a framework for developing an AI application starting with simple techniques and progressing toward more sophisticated methods and discover how to efficiently deploy these applications Understand what AI engineering is and how it differs from traditional machine learning engineering Learn the process for developing an AI application the challenges at each step and approaches to address them Explore various model adaptation techniques including prompt engineering RAG fine tuning agents and dataset engineering and understand how and why they work Examine the bottlenecks for latency and cost when serving foundation models and learn how to overcome them Choose the right model dataset evaluation benchmarks and metrics for
