Context And Content Essays On Intentionality In Speech And Thought:

Context and Content Robert Stalnaker, 1999 *Context and Content* Robert Stalnaker, 1999 In *Context and Content* Robert Stalnaker develops a philosophical picture of the nature of speech and thought and the relations between them Two themes in particular run through these collected essays the role that the context in which speech takes place plays in accounting for the way language is used to express thought and the role of the external environment in determining the contents of our thoughts Stalnaker argues against the widespread assumption of the priority of linguistic over mental representation which he suggests has had a distorting influence on our understanding The first part of the book develops a framework for representing contexts and the way they interact with the interpretation of what is said in them This framework is used to help to explain a range of linguistic phenomena concerning presupposition and assertion conditional statements the attribution of beliefs and the use of names descriptions and pronouns to refer Stalnaker then draws out the conception of thought and its content that is implicit in this framework He defends externalism about thought the assumption that our thoughts have the contents they have in virtue of the way we are situated in the world and explores the role of linguistic action and linguistic structure in determining the contents of our thoughts *Context and Content* offers philosophers and cognitive scientists a summation of Stalnaker's important and influential work in this area His new introduction to the volume gives an overview of this work and offers a convenient way in for those who are new to it The Oxford Cognitive Science series is a new forum for the best contemporary work in this flourishing field where various disciplines cognitive psychology philosophy linguistics cognitive neuroscience and computational theory join forces in the investigation of thought awareness understanding and associated workings of the mind Each book constitutes an original contribution to its subject but will be accessible beyond the ranks of specialists so as to reach a broad interdisciplinary readership The series will be carefully shaped and steered with the aim of representing the most important developments in the field and bringing together its constituent disciplines **Context and Content** Robert C. Stalnaker, 1999-04-08 In *Context and Content* Robert Stalnaker develops a philosophical picture of the nature of speech and thought and the relations between them Two themes in particular run through these collected essays the role that the context in which speech takes place plays in accounting for the way language is used to express thought and the role of the external environment in determining the contents of our thoughts Stalnaker argues against the widespread assumption of the priority of linguistic over mental representation which he suggests has had a distorting influence on our understanding The first part of the book develops a framework for representing contexts and the way they interact with the interpretation of what is said in them This framework is used to help to explain a range of linguistic phenomena concerning presupposition and assertion conditional statements the attribution of beliefs and the use of names descriptions and pronouns to refer Stalnaker then draws out the conception of thought and its content that is implicit in this framework He defends externalism about thought the assumption that our

thoughts have the contents they have in virtue of the way we are situated in the world and explores the role of linguistic action and linguistic structure in determining the contents of our thoughts Context and Content offers philosophers and cognitive scientists a summation of Stalnaker's important and influential work in this area His new introduction to the volume gives an overview of this work and offers a convenient way in for those who are new to it The Oxford Cognitive Science series is a new forum for the best contemporary work in this flourishing field where various disciplines cognitive psychology philosophy linguistics cognitive neuroscience and computational theory join forces in the investigation of thought awareness understanding and associated workings of the mind Each book constitutes an original contribution to its subject but will be accessible beyond the ranks of specialists so as to reach a broad interdisciplinary readership The series will be carefully shaped and steered with the aim of representing the most important developments in the field and bringing together its constituent disciplines

The Fragmented Mind Cristina Borgoni, Dirk Kindermann, Andrea Onofri, 2021-07-29 Mental fragmentation is the thesis that the mind is fragmented or compartmentalized Roughly this means that an agent's overall belief state is divided into several sub states fragments These fragments need not make for a consistent and deductively closed belief system The thesis of mental fragmentation became popular through the work of philosophers like Christopher Cherniak David Lewis and Robert Stalnaker in the 1980s and has recently attracted increased attention This volume is the first collection of essays devoted to the topic of mental fragmentation It features important new contributions by leading experts in the philosophy of mind epistemology and philosophy of language Opening with an accessible introduction providing a systematic overview of the current debate the fourteen essays cover a wide range of issues foundational issues and motivations for fragmentation the rationality or irrationality of fragmentation fragmentation's role in language the relationship between fragmentation and mental files and the implications of fragmentation for the analysis of implicit attitudes

What is a Context? Rita Finkbeiner, Jörg Meibauer, Petra B. Schumacher, 2012 Context is a core notion of linguistic theory However while there are numerous attempts at explaining single aspects of the notion of context these attempts are rather diverse and do not easily converge to a unified theory of context The present multi faceted collection of papers reconsiders the notion of context and its challenges for linguistics from different theoretical and empirical angles Part I offers insights into a wide range of current approaches to context including theoretical pragmatics neurolinguistics clinical pragmatics interactional linguistics and psycholinguistics Part II presents new empirical findings on the role of context from case studies on idioms unarticulated constituents argument linking and numerically quantified expressions Bringing together different theoretical frameworks the volume provides thought provoking discussions of how the notion of context can be understood modeled and implemented in linguistics It is essential for researchers interested in theoretical and applied linguistics the semantics pragmatics interface and experimental pragmatics
