

SUPERCONTINENTAL COALESCENCE PATHWAYS

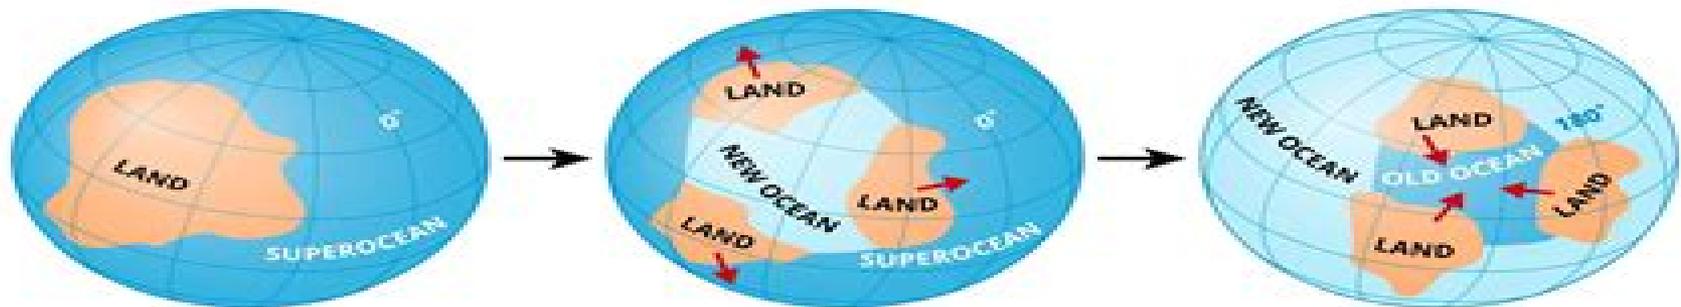

INTROVERSION

A new interior ocean forms and expands until subduction zones appear within it that draw the continental fragments back together.

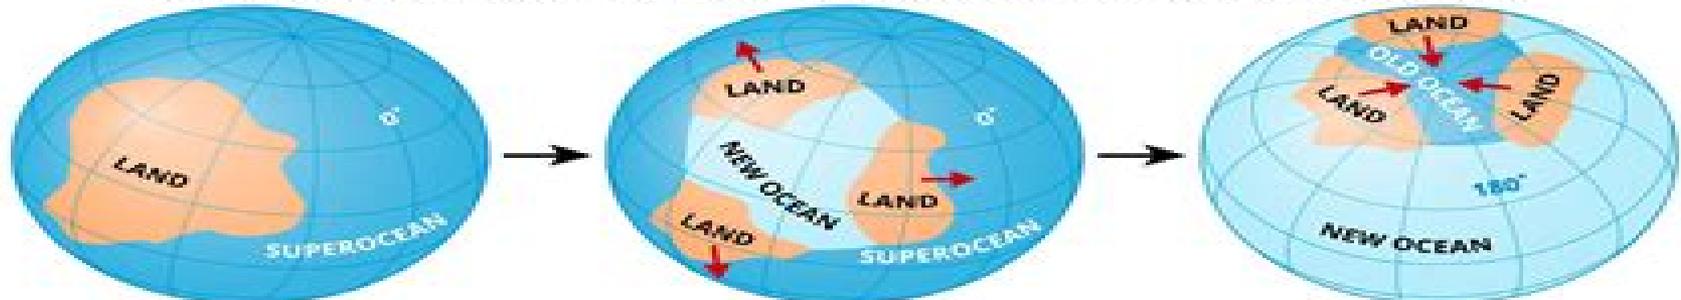

EXTROVERSION

A new interior ocean expands as the continental fragments drift away from one another only to collide later, possibly on the other side of the globe, which shrinks the former exterior ocean.

ORTHOVERSION

Fragments become trapped within a north-south band of subduction that occurred beyond the margins of the former supercontinent and later collide with one another one-quarter of a globe away from the centre of the previous supercontinent.

Continents And Supercontinents:

Continents and Supercontinents John J. W. Rogers, M. Santosh, 2004-09-16 Surveys the origin of continents and the accretion and breakup of supercontinents through earth history This book also shows how these processes affected the composition of seawater climate and the evolution of life *Continents and Supercontinents* John J. W. Rogers, M. Santosh, 2004-09-16 To this day there is a great amount of controversy about where when and how the so called supercontinents Pangea Gondwana Rodinia and Columbia were made and broken Continents and Supercontinents frames that controversy by giving all the necessary background on how continental crust is formed modified and destroyed and what forces move plates It also discusses how these processes affect the composition of seawater climate and the evolution of life Rogers and Santosh begin with a survey of plate tectonics and go on to describe the composition production and destruction of continental and oceanic crust and show that cratons or assemblies of cratons became the first true continents approximately one billion years after the earliest continental crust evolved The middle part of the book concentrates on supercontinents beginning with a discussion of types of orogenic belts distinguishing those that formed by closure of an ocean basin within the belt and those that formed by intracontinental deformation caused by stresses generated elsewhere This information permits discrimination between models of supercontinent formation by accretion of numerous small terranes and by reorganization of large old continental blocks This background leads to a description of the assembly and fragmentation of supercontinents throughout earth history The record is most difficult to interpret for the oldest supercontinent Columbia and also controversial for Rodinia the next youngest supercontinent The configurations and pattern of breakup of Gondwana and Pangea are well known but some aspects of their assembly are unclear The book also briefly describes the histories of continents after the breakup of Pangea and discusses how changes in the composition of seawater climate and life may have been affected by the sizes and locations of continents and supercontinents **Supercontinent** Ted Nield, 2007 Explores the Supercontinent Cycle from the earliest recorded time to the geological discoveries of today including the drifting of the continents and the evolution of dinosaurs *Gondwana Research*, 2004 *Origin and Evolution of Continents* Yoichi Motoyoshi, Kazuyuki Shiraishi, 1998 **Supercontinent Cycles Through Earth History** Z.X. Li, D.A.D. Evans, J.B. Murphy, 2016-05-20 The supercontinent cycle hypothesis attributes planetary scale episodic tectonic events to an intrinsic self organizing mode of mantle convection governed by the buoyancy of continental lithosphere that resists subduction during the closure of old ocean basins and the consequent reorganization of mantle convection cells leading to the opening of new ocean basins Characteristic timescales of the cycle are typically 500 to 700 million years Proposed spatial patterns of cyclicity range from hemispheric introversion to antipodal extroversion to precisely between those end members orthoversion Advances in our understanding can arise from theoretical or numerical modelling primary data acquisition relevant to continental reconstructions and spatiotemporal correlations between plate kinematics
