Contingent Creatures A Reward Event Theory Of Motivation:

Contingent Creatures Carolyn R. Morillo,1995-10-03 What motivates behavior What are the qualities of experience which make life worth living Taking a new interdisciplinary approach Morillo advances the theory that pleasure interpreted as a distinct separable noncognitive quality of experience is essential for all positive motivation and is the only intrinsic nonmoral good in the lives of human beings and many other sentient creatures Morillo supports her arguments with recent neuropsychological evidence concerning the role of reward centers in the brain and philosophical arguments for a naturalistic theory of value and the good life Contingent Creatures will interest philosophers psychologists and neurobiologists

Evolutionary Psychology and the Propositional-attitudes Alex Walter,2012-02-16 The two essays provide a critical examination of theory and research in the field of evolutionary psychology The view advanced here is that philosophical materialism and minimalist assumptions about adaptation serve Darwinian psychology better than the more popular alternative view that relies on cognitive dualism and propositional attitude psychology to formulate evolutionary psychology theory A commitment to cognitive dualism is destined to undermine the physical basis of behavior upon which evolutionary theory depends Many evolutionary psychologists do not see this but are seduced by the easy way in which hypotheses can be formulated using the propositional attitude model The challenge is to develop a materialistic and mechanistic approach to understanding human cognition and behavior including linguistic and social behavior

Darwinian Hedonism and the Epidemic of Unhealthy Behavior David M. Williams,2019-03-21 Provides a new approach to psychological hedonism and applies it to the growing global epidemic of unhealthy behavior *Affective Determinants of Health Behavior*

David Michael Williams,Ryan E. Rhodes,Mark T. Conner,2018 In the last 20 30 years research on affective determinants of health behavior has proliferated *Affective Determinants of Health Behavior* brings together this burgeoning area of research into a single volume and features contributions from leading experts in their respective areas Editors David M Williams Ryan E Rhodes and Mark T Conner and their contributing authors focus on a fascinating range of affective concepts including but not limited to hedonic response incidental affect perceived satisfaction anticipated affect affective attitudes and affective associations In the first part of the book the role of affective concepts in multiple theories of health behavior is highlighted and expanded including theories of action control dual processing temporal self regulation self determination and planned

behavior along with a new theory of hedonic motivation The second part of the book focuses on the role of affective concepts in specific health behavior domains including physical activity eating smoking substance use sex tanning blood donation the performance of health professionals cancer screenings and cancer control Affective Determinants of Health Behavior offers readers an important window into existing research and serves as a showcase for important insights on possible new directions and implications for intervention

Wanted, More than Human Intellectual Property Johanna Gibson,2024-12-27 This book analyses animal creativity in order to unsettle the dominant assumptions that underpin current ideas of authorship and ownership in intellectual property Drawing upon theories of animal behaviour and cognitive ethology the book exposes and disrupts the anthropocentrism that informs prevailing assumptions about creativity intentionality and authorship within the field of intellectual property towards a new theory of authorship and personhood through play and the playful Moving on to challenge the invocation of a more general human nonhuman distinction in this context the book also engages the challenge to this distinction posed by artificial intelligence Incorporating critical animal studies behavioural science ethology critical legal studies and legal philosophy the book presents a new idea of creativity which undermines the kind of rivalrous models now common in the field of intellectual property This book will be of considerable interest to those studying and teaching in the area of intellectual property as well as in animal law It will also appeal to legal theorists and others working in the social sciences in the areas of posthumanism and animal studies

driven by curiosity play interest in novel stimuli and surprising events autonomous goal setting and the pleasure of acquiring new competencies This allows the cumulative acquisition of knowledge and skills that can later be used to accomplish fitness enhancing goals Intrinsic motivations continue during adulthood and in humans artistic creativity scientific discovery and subjective well being owe much to them The study of intrinsically motivated behavior has a long history in psychological and ethological research which is now being reinvigorated by perspectives from neuroscience artificial intelligence and computer science For example recent neuroscientific research is discovering how neuromodulators like dopamine and noradrenaline relate not only to extrinsic rewards but also to novel and surprising events how brain areas such as the superior colliculus and the hippocampus are involved in the perception and processing of events novel stimuli and novel associations of stimuli and how violations of predictions and expectations influence learning and motivation Computational approaches are characterizing the space of possible reinforcement learning algorithms and their augmentation by intrinsic reinforcements of different kinds Research in robotics and machine learning is yielding systems with increasing autonomy and capacity for self improvement artificial systems with motivations that are similar to those of real organisms and support prolonged autonomous learning Computational research on intrinsic motivation is being complemented by and closely interacting with research that aims to build hierarchical architectures capable of acquiring storing and exploiting the knowledge and skills acquired through intrinsically motivated learning Now is an important moment in the study of intrinsically motivated open ended development requiring contributions and integration across a large number of fields within the cognitive sciences This Research Topic aims to contribute to this effort by welcoming papers carried out with ethological psychological neuroscientific and computational approaches as well as research that cuts across disciplines and approaches
