Contemporary Statistics Gordon, Sheldon P. Gordon, Florence S. Gordon, 1993-10 **Contemporary Statistics** Gordon Staff, Sheldon P. Gordon, Florence S. Gordon, Jane-Marie Wright, 1994-01-01 Contemporary Approaches to Neuropsychological Assessment Gerald Goldstein, Theresa M. Incagnoli, 2013-06-29 This volume reflects in part an update of Clinical Application of Neuropsychological Test Batteries edited by Theresa Incagnoli Gerald Goldstein and Charles Golden some 10 years ago While the initial concept of the present editors involved doing a straightforward update of each chapter it soon became apparent that the field of clinical neuropsychology had changed so dramatically and rapidly that substantial changes in the outline had to be made It was our view that sufficient interest remained in the standard comprehensive neuropsychological test batteries to make an update worthwhile We asked four senior people to take on this assignment James Moses Jr and Arnold Purisch in the case of the Luria Nebraska Battery and James Reed and Homer Reed for the Halstead Reitan Battery These individuals all have long term associations with these procedures and can be viewed as pioneers in their development However it also seemed to us that there was an increasing interest in the psychometric aspects of the standard procedures and in assessment issues related to the relative merits of using standard or individualized assessment strategies Thus we have chapters by Elbert Russell and Gerald Goldstein that provide discussions of these current methodological and clinical issues During the past 10 years the cognitive revolution has made a strong impact on neuropsychology The interest of cognitive psychologists in brain function has increased dramatically and we now have an active field of cognitive neuropsychology something that was only beginning 10 years ago **Perspectives on Contemporary Statistics** David Caster Hoaglin, David S. Moore, 1992 This book is a must for anyone who teaches statistics particularly those who teach beginning statistics mathematicians social scientists engineers as well as graduate students and others new to the field The authors focus on topics central to the teaching of statistics for beginners and other expositions that are guided by the current state of statistical research and practice Statistical practice has changed radically during the past generation under the impact of ever cheaper and more accessible computing power Beginning instruction has lagged behind the evolution of the field Software now enables students to shortcut unpleasant calculations but this is only the most obvious consequences of changing statistical practice the content and emphases of statistics instruction still needs much rethinking This volume assembles nine new essays on important topics in present day statistics at the college with various levels of mathematics preparation and from diverse disciplinary backgrounds Accordingly the chapters present modern perspectives on central aspects of statistics and emphasize the conceptual content that should accompany all varieties of beginning instruction The book opens with a contemporary overview of statistics as the science of data a view much broader than the inference from data emphasized by much traditional teaching The next two chapters discuss the philosophy and some of the tools used in data analysis and describe the impact of computing on data analysis and inference and its

implication for teaching The book concludes with introductions to diagnostics and to the alternative approach embodied in resistant and robust procedures from back cover
