**Contemporary Optics** A. Ghatak, 2012-12-06 With the advent of lasers numerous applications of it such as optical information processing holography and optical communication have evolved These applications have made the study of optics essential for scientists and engineers The present volume intended for senior under graduate and first year graduate students introduces basic concepts necessary for an understanding of many of these applications The book has grown out of lectures given at the Master's level to students of applied optics at the Indian Institute of Technology New Delhi Chapters 1-3 deal with geometrical optics where we develop the theory behind the tracing of rays and calculation of aberrations The formulas for aberrations are derived from first principles We use the method involving Luneburg's treatment starting from Hamilton's equations since we believe that this method is easy to understand Chapters 4-8 discuss the more important aspects of contemporary physical optics namely diffraction coherence Fourier optics and holography The basis for discussion is the scalar wave equation A number of applications of spatial frequency filtering and holography are also discussed With the availability of high power laser beams a large number of nonlinear optical phenomena have been studied Of the various nonlinear phenomena the self focusing or defocusing of light beams due to the nonlinear dependence of the dielectric constant on intensity has received considerable attention In Chapter 9 we discuss in detail the steady state self focusing of light beams

**Contemporary Optics for Scientists and Engineering** Allen Nussbaum, Richard A. Phillips, 1976  
**Modern Optics Simplified** B. D. Guenther, 2019-09-18 This textbook reduces the complexity of the

coverage of optics to allow a student with only elementary calculus to learn the principles of optics and the modern Fourier theory of diffraction and imaging Students majoring in sciences or engineering and taking a standard physics course on optics will find this text useful Examples of a variety of applications dependent on optics allow the student to connect this course to their particular field of interest Topics covered include aberrations with experimental examples correction of chromatic aberration explanation of coherence and the use of interference theory to design an antireflection coating Fourier transform optics and its application to diffraction and imaging use of Gaussian wave theory and fiber optics make the text of interest to those in electrical and bioengineering as well as physics and medical science The text includes hundreds of photos figures and diagrams to provide readers with strong visual insights into optics More difficult optional topics are highlighted throughout and the need for experience with differential equations and extensive use of vector theory are avoided by using a one dimensional theory where possible Maxwell's equations are introduced only to determine the properties of a light wave and the boundary conditions are introduced to characterize reflection and refraction Most discussion is limited to reflection The book also introduces Fourier transforms as they are needed in the discussion of diffraction and imaging Relativity for Scientists and Engineers Ray Skinner,2014-04-22 Three part treatment explores special relativity in terms of kinematics and introductory dynamics as well as general relativity Ideal for classroom use supplementary reading and self study Numerous problems with solutions 1969 edition Optics for Engineers Jason Penn,2016-07-27 Optics is the branch of physics that studies the properties of light and its interaction with matter It also involves design and construction of instruments required for studying the various phenomena related to light This discipline usually includes ultraviolet visible and infrared radiation Light is an electromagnetic wave and it exhibits the behavior of wave as well as particle To understand this dual nature optics has been further divided into ray optics and wave optics It includes daily use objects and new technologies to study the properties of light such as lenses mirrors microscopes fibre optics and lasers This book provides significant information of this discipline to help develop a good understanding of optics and related fields It includes contributions of experts and scientists which will provide innovative insights to the readers The aim of this text is to present researches that have transformed this discipline and aided its advancement It is appropriate for students seeking detailed information in the field of optics as well as experts Lasers A. E. Siegman,1986-10-17 Annotation Lasers is both a text and general reference book with an emphasis on basic laser principles and theory The book is for all scientists and engineers who work with lasers
