Contracting Markov Decision Processes Johannes A. E. van Nunen, 1976 **Contracting Markov Decision Processes** J. A. E. van Nunen, 1976 **Estimation and Adaptive Control of Span-contracting Markov Decision Processes** G. Hübner, 1989 **Constrained Markov Decision Processes** Eitan Altman, 1999-03-30 This book provides a unified approach for the study of constrained Markov decision processes with a finite state space and unbounded costs Unlike the single controller case considered in many other books the author considers a single controller with several objectives such as minimizing delays and loss probabilities and maximization of throughputs It is desirable to design a controller that minimizes one cost objective subject to inequality constraints on other cost objectives This framework describes dynamic decision problems arising frequently in many engineering fields A thorough overview of these applications is presented in the introduction The book is then divided into three sections that build upon each other The first part explains the theory for the finite state space The author characterizes the set of achievable expected occupation measures as well as performance vectors and identifies simple classes of policies among which optimal policies exist This allows the reduction of the original dynamic into a linear program A Lagrangian approach is then used to derive the dual linear program using dynamic programming techniques In the second part these results are extended to the infinite state space and action spaces The author provides two frameworks the case where costs are bounded below and the contracting framework The third part builds upon the results of the first two parts and examines asymptotical results of the convergence of both the value and the policies in the time horizon and in the discount factor Finally several state truncation algorithms that enable the approximation of the solution of the original control problem via finite linear programs are given **II International Scientific Conference "Recent Advances in Architecture and Construction" 2024** Sergey Vasil'yevich Klyuev, Nikolay Ivanovich Vatin, Karina Rashidovna Nabiullina, Venera Maratovna Yumagulova, 2025-02-20 This book gathers the latest advances innovations and applications in the field of construction engineering and architecture as presented by researchers at the II International Scientific Conference Recent Advances in Architecture and Construction held in Kazan Russia on May 14 15 2024 It covers highly diverse topics including engineering structures advanced concrete technologies durable structures smart structures and materials smart cities architectural and environmental design modern trends in the development of architectural typology sustainable urban planning built environment construction technologies and construction management The contributions which were selected by means of a rigorous international peer review process highlight numerous exciting ideas that will spur novel research directions and foster multidisciplinary collaborations

Dynamic Programming and Its Applications Martin L. Puterman, 2014-05-10 *Dynamic Programming and Its Applications* provides information pertinent to the theory and application of dynamic programming This book presents the development and future directions for dynamic programming Organized into four parts encompassing 23 chapters this book

begins with an overview of recurrence conditions for countable state Markov decision problems which ensure that the optimal average reward exists and satisfies the functional equation of dynamic programming This text then provides an extensive analysis of the theory of successive approximation for Markov decision problems Other chapters consider the computational methods for deterministic finite horizon problems and present a unified and insightful presentation of several foundational questions This book discusses as well the relationship between policy iteration and Newton's method The final chapter deals with the main factors severely limiting the application of dynamic programming in practice This book is a valuable resource for growth theorists economists biologists mathematicians and applied management scientists

Stochastic Models in Operations Research: Stochastic optimization Daniel P. Heyman, Matthew J.

Sobel, 2004-01-01 This two volume set of texts explores the central facts and ideas of stochastic processes illustrating their use in models based on applied and theoretical investigations They demonstrate the interdependence of three areas of study that usually receive separate treatments stochastic processes operating characteristics of stochastic systems and stochastic optimization Comprehensive in its scope they emphasize the practical importance intellectual stimulation and mathematical elegance of stochastic models and are intended primarily as graduate level texts
