Control Flow Semantics:

    Control Flow Semantics J. W. De Bakker,Erik P. De Vink,1996-04-01 Control Flow Semantics presents a unified formal treatment of the semantics of a wide spectrum of control flow notions as found in sequential concurrent logic object oriented and functional programming languages Control Flow Semantics presents a unified formal treatment of the semantics of a wide spectrum of control flow notions as found in sequential concurrent logic object oriented and functional programming languages Whereas in more traditional approaches one focuses on input output behavior in this work equal attention is devoted to finite and infinite computations the latter motivated by the growing importance of reactive systems Knowledge of the comparative semantics of control structures is critical for the designers of programming languages and it is difficult to choose from today s bewildering variety of control flow concepts the ways in which a program specifies the successive steps to be taken during execution Encyclopedic in scope Control Flow Semantics provides comprehensive coverage of these concepts developing operational and denotational models for control flow in 27 languages In all cases precise statements are given relating these models A rich body of semantic definitional techniques is presented including labeled transition systems higher order definitions resumptions and continuations linear or sequence based models and models specified by domain equations Moreover both symbol based or schematic languages prevalent in the study of concurrency and state based or interpreted languages are considered The book is founded on a unifying mathematical basis of metric structures allowing the full modeling of infinite behavior as well as the exploitation of some classical results such as Banach s fixed point theorem Perspectives on further topics such as full abstractness noninterleaving semantics for parallelism and second order programming are also included Foundations of Computing series   Automated Technology for Verification and Analysis Zhe Hou,Vijay Ganesh,2021-10-13 This book constitutes the refereed proceedings of the 19th International Symposium on Automated Technology for Verification and Analysis ATVA 2021 held in Gold Coast Australia in October 2021 The symposium is dedicated to promoting research in theoretical and practical aspects of automated analysis verification and synthesis by providing an international venue for the researchers to present new results The 19 regular papers presented together with 4 tool papers and 1 invited paper were carefully reviewed and selected from 75 submissions The papers are divided into the following topical sub headings Automata Theory Machine learning for Formal Methods Theorem Proving and Tools Model Checking Probabilistic Analysis Software and Hardware Verification System Synthesis and Approximation and Verification of Machine Learning   **Control flow treatment in a simple semantics-directed compiler generator** Neil D.
