Handbook of Modern Pharmaceutical Analysis Satinder Ahuja, Stephen Scypinski, 2001

This book describes the role modern pharmaceutical analysis plays in the development of new drugs. Detailed information is provided as to how the quality of drug products is assured from the point of discovery until the patient uses the drug. Coverage includes state of the art topics such as analytics for combinatorial chemistry and high throughput screening, formulation development, stability studies, international regulatory aspects and documentation and future technologies that are likely to impact the field. Emphasis is placed on current easy to follow methods that readers can apply in their laboratories. No book has effectively replaced the very popular text *Pharmaceutical Analysis* that was edited in the 1960s by Tak Higuchi. This book will fill that gap with an up to date treatment that is both handy and authoritative.

Handbook of LC-MS Bioanalysis Wenkui Li, Jie Zhang, Francis L. S. Tse, 2013-09-03. Consolidates the information LC MS bioanalytical scientists need to analyze small molecules and macromolecules. The field of bioanalysis has advanced rapidly propelled by new approaches for developing bioanalytical methods, new liquid chromatographic LC techniques and new mass spectrometric MS instruments. Moreover there are a host of guidelines and regulations designed to ensure the quality of bioanalytical results. Presenting the best practices, experimental protocols and the latest understanding of regulations, this book offers a comprehensive review of LC MS bioanalysis of small molecules and macromolecules. It not only addresses the needs of bioanalytical scientists working on routine projects but also explores advanced and emerging technologies such as high resolution mass spectrometry and dried blood spot microsampling. *Handbook of LC MS Bioanalysis* features contributions from an international team of leading bioanalytical scientists. Their contributions reflect a review of the latest findings, practices and regulations as well as their own firsthand analytical laboratory experience. The book thoroughly examines Fundamentals of LC MS bioanalysis in drug discovery, drug development and therapeutic drug monitoring. The current understanding of regulations governing LC MS bioanalysis. Best practices and detailed technical instructions for LC MS bioanalysis, method development, validation and stability assessment of analytes of interest. Experimental guidelines and protocols for quantitative LC MS bioanalysis of challenging molecules including pro drugs, acyl glucuronides, N oxides, reactive compounds and photosensitive and autooxidative compounds. With its focus on current bioanalytical practice, *Handbook of LC MS Bioanalysis* enables bioanalytical scientists to develop and validate robust LC MS assay methods all in compliance with current regulations and standards. Validation and Essential Instrument Qualification Chung Chow Chan, Herman Lam, Xue-Ming Zhang, 2011-03-01. Practical approaches to ensure that analytical methods and instruments meet GMP standards and requirements. Complementing the authors first book *Analytical Method Validation and Instrument Performance Verification*, this new volume provides coverage of more advanced topics focusing on additional and supplemental methods, instruments and electronic systems that are used in pharmaceutical, biopharmaceutical and clinical testing. Readers will gain new and valuable insights that enable them to avoid common pitfalls in order to seamlessly conduct analytical method validation as well as

instrument operation qualification and performance verification Part 1 Method Validation begins with an overview of the book's risk based approach to phase appropriate validation and instrument qualification it then focuses on the strategies and requirements for early phase drug development including validation of specific techniques and functions such as process analytical technology cleaning validation and validation of laboratory information management systems Part 2 Instrument Performance Verification explores the underlying principles and techniques for verifying instrument performance coverage includes analytical instruments that are increasingly important to the pharmaceutical industry such as NIR spectrometers and particle size analyzers and offers readers a variety of alternative approaches for the successful verification of instrument performance based on the needs of their labs At the end of each chapter the authors examine important practical problems and share their solutions All the methods covered in this book follow Good Analytical Practices GAP to ensure that reliable data are generated in compliance with current Good Manufacturing Practices cGMP Analysts scientists engineers technologists and technical managers should turn to this book to ensure that analytical methods and instruments are accurate and meet GMP standards and requirements
