Animals Through The Camera Eye:

Animals Through the Camera Eye Per Hafslund, 1965 An informal text accompanies these close ups of small wild animals

[Animal Models in Eye Research](#) ,2011-04-28 The eye is a complex sensory organ which enables visual perception of the world Thus the eye has several tissues that do different tasks One of the most basic aspects of eye function is the sensitivity of cells to light and its transduction though the optic nerve to the brain Different organisms use different ways to achieve these tasks In this sense eye function becomes a very important evolutionary aspect as well This book presents the different animal models that are commonly used for eye research and their uniqueness in evaluating different aspects of eye development evolution physiology and disease Presents information on the major animal models used in eye research including invertebrates and vertebrates Provides researchers with information needed to choose between model organisms Includes an introductory chapter on the different types of eyes stressing possible common molecular machinery [Thomas Hardy Through the Camera's Eye](#) Hermann Lea, James Stevens-Cox, 1964 [The Natural History of Animals](#) James Richard Ainsworth Davis, 1904 **Encyclopedia of Animal Behavior** ,2019-01-21 Encyclopedia of Animal Behavior Second Edition Four Volume Set the latest update since the 2010 release builds upon the solid foundation established in the first edition Updated sections include Host parasite interactions Vertebrate social behavior and the introduction of overview essays that boost the book s comprehensive detail The structure for the work is modified to accommodate a better grouping of subjects Some chapters have been reshuffled with section headings combined or modified Represents a one stop resource for scientifically reliable information on animal behavior Provides comparative approaches including the perspective of evolutionary biologists physiologists endocrinologists neuroscientists and psychologists Includes multimedia features in the online version that offer accessible tools to readers looking to deepen their understanding [The Sensory Ecology of Birds](#) Graham R. Martin, 2017-03-30 Birds are renowned for their exceptional vision and the way that this enables them to survive and navigate the world in such a unique way However it is now recognised that avian behaviour is guided by information drawn from many different senses which are then used in integrated and complementary ways to answer the many different sensory challenges posed by specific environments and particular tasks Understanding how sensory information is used by birds has important applications in conservation such as providing vital insights into why birds are prone to collisions with structures like power lines and wind turbines and why so many diving birds become entrapped in nets A sensory ecology approach suggests how these problems can be mitigated The Sensory Ecology of Birds ranges widely across species environments and behaviours to present a synthesis that challenges previous assumptions about the information that controls the behaviour of birds A bird may use a wide range and combination of sensory information that comes from sight hearing smell mechanoreception taste and magnetoreception It may also include specific refinements of senses such as echolocation and remote touch from the bill The book recognises that there are many complex and subtle trade offs and complementarities

of information between different types of sensory information This accessible text will be of interest to a wide ornithological readership from undergraduates to researchers as well as a broader audience of behavioural ecologists and evolutionary biologists
