Bard, 2013-03-09 The use of optimization techniques has become integral to the design and analysis of most industrial and socio economic systems Great strides have been made recently in the solution of large scale problems arising in such areas as production planning airline scheduling government regulation and engineering design to name a few Analysts have found however that standard mathematical programming models are often inadequate in these situations because more than a single objective function and a single decision maker are involved Multiple objective programming deals with the extension of optimization techniques to account for several objective functions while game theory deals with the inter personal dynamics surrounding conflict Bilevel programming the focus of this book is in a narrow sense the combination of the two It addresses the problem in which two decision makers each with their individual objectives act and react in a noncooperative sequential manner The actions of one affect the choices and payoffs available to the other but neither player can completely dominate the other in the traditional sense **The Economics of Disappearing Distance** Börje Johansson, 2019-09-18 This title was first published in 2003 This book focuses on the role of tangible and intangible networks that affect spatial interdependencies in economic and social life It addresses the question is the effect of distance disappearing In examining this question the book considers the types of interaction that bring about globalisation of markets as well as social life in general and the distortion of distance patterns and changes in spatial interdependencies The contributions elaborate theory and methods by examining hierarchical fields of internal and external influence on regional change sources of productivity growth in a network of industries endogenous growth and development policies The book concludes with an assessment of plan evaluation methodologies for a changing and globalizing world characterized by new economic networks and networking arrangements **ICEG2006-Proceedings of the 6th International Conference on e-Government**, Engineering Decision Making and Risk Management Jeffrey W.
