Caught In The Turtle:

Proceedings of the Twentieth Annual Symposium on Sea Turtle Biology and Conservation, 29 February Through 4 March 2000, Orlando, Florida, U.S.A. Andrea Mosier, Allen Michael Foley, Beth Brost, 2002 **Fisher Profiles and Perceptions of Sea Turtle-fishery Interactions**, **Conservation of Pacific Sea Turtles** Peter H. Dutton, Dale Squires, Mahfuzuddin Ahmed, 2011-07-31 Across the Pacific populations of some species of sea turtles face extinction unless recent dramatic declines are reversed The continuing decline of leatherbacks and loggerheads in particular illustrates the limitations of the current gradual and unilateral approach to conservation Recovery requires instead a holistic solution that addresses all sources of mortality throughout the entire life history and habitat use of these transnational populations Historically conservation efforts have focused on nesting sites to protect eggs and breeding females mortality from coastal and highseas fisheries was not addressed In the past five years these recovery efforts have widened to include rigorously curtailing fishing and technological fixes that lower rates of incidental sea turtle deaths during fishing Although each of these approaches shows promise it has become increasingly clear that they alone will not recover severely depleted populations Recognizing the urgency of the problem this book presents ideas and case studies by conservation biologists economists marine life policy experts fishing industry and fisheries professionals management specialists and development assistance researchers It provides a new synthesis and blueprint for action that shifts the paradigm from piecemeal and unilateral conservation to a more holistic and multilateral approach to the recovery of Pacific sea turtle populations *The Ecology, Exploitation and Conservation of River Turtles* Don Moll, Edward O. Moll, 2004-04-08 The underlying theme of this book is that a widespread taxonomically diverse group of animals important both from ecological and human resource perspectives remains poorly understood and in decline while receiving scant attention from the ecological and conservation community This volume proposes a comprehensive overview of the world's river turtles ecology conservation and management It begins with a categorization of taxa which inhabit flowing water habitats followed by information on their evolutionary and physical diversity and biogeography Within the framework of ecology the authors discuss the composition of river turtle communities in different types of lotic habitats and regions population dynamics movements reproductive characteristics and behavior predators and feeding relationships In a conservation and management section the authors identify and evaluate the nature and intensity of factors which threaten river turtle survival almost all of which involve direct human exploitation or indirect effects of human induced habitat alteration and degradation They then list and evaluate the various schemes which have been proposed or employed to halt declines and restore populations and make recommendations for future management plans for specific species and regions In closing they state their viewpoint concerning future research directions and priorities and an evaluation of future prospects for survival of the world's river turtle species *Advances in the Biology and Conservation of Marine Turtles* Sara M.
