Caustics Catastrophes And Wave Fields:

Caustics, Catastrophes and Wave Fields Yu.A. Kravtsov, Yu.I. Orlov, 2012-12-06 Caustics Catastrophes and Wave Fields in a sense continues the treatment of the earlier volume 6 Geometrical Optics of Inhomogeneous Media in the present book series by analysing caustics and their fields on the basis of modern catastrophe theory This volume covers the key generalisations of geometrical optics related to caustic asymptotic expansions The Lewis Kravtsov method of standard functions Maslov s method of canonical operators Orlov s method of interference integrals as well as their modifications for penumbra space time random and other types of caustics All the methods are amply illustrated by worked problems concerning relevant wave field applications Caustics, Catastrophes and Wave Fields Yuri Aleksandrovich Kravcov, IŇUŇriŇ Il'ich Orlov, 1993 *Caustics, Catastrophes and Wave Fields* Yu.A. Kravtsov, Yu.I. Orlov, 2012-12-06 Caustics Catastrophes and Wave Fields in a sense continues the treatment of the earlier volume 6 Geometrical Optics of Inhomogeneous Media by analysing caustics and their fields on the basis of modern catastrophe theory The present volume covers local and uniform caustic asymptotic expansions The Lewis Kravtsov method of standard functions Maslov s method of canonical operators Orlov s method of interference integrals as well as their modifications for penumbra space time random and other types of caustics All the methods are amply illustrated by worked problems concerning relevant wave field applications **Caustics, Catastrophes and Wave Fields** ŇUŇriŇ Aleksandrovich KravtŇiŇov, IŇUŇriŇ Il'ich Orlov, 1999 The second edition of Histological Typing of Salivary Gland Tumours is more extensive and detailed than the previous edition New technical methods have increased our understanding of many tumours The various types of carcinomas are categorized separately and the inclusion of the TNM Classification of salivary gland tumours and the more detailed description of the lesions will contribute to a better understanding *The Transient Wave Fields in the Vicinity of the Cuspoid Caustics* Michael G. Brown, ROSENSTIEL SCHOOL OF MARINE AND ATMOSPHERIC SCIENCE MIAMI FL DIV OF OCEAN ENGINEERING., 1986 A general formalism is presented for the study of the transient wave fields in the vicinity of caustics of arbitrary complexity The caustics are classified using catastrophe theory A general introduction to the subject is presented and explicit results numerical and analytical for the cuspid family of catastrophes which show the smooth variation of the acoustic field as the control parameters are independently varied These results vividly demonstrate the phenomenon of ray focusing showing the number of rays which converge at each catastrophe the resulting phase shifts they undergo as well as their decay in shadow regions Analytical results are given which describe the time dependent acoustic field on and at large distances away from each of the cuspid catastrophes Four sets of numbers are introduced which describe the behavior of the wave field in the vicinity of each catastrophe These are 1 an exponent which describes the temporal decay of the acoustic field on the most singular point of each catastrophe 2 a number which describes the asymmetry of the time dependent acoustic field on the most singular point of each catastrophe 3 an exponent which describes the time separation as a function

of control parameter between individual ray arrivals as each of the control parameters are independently varied and 4 an exponent which describes the asymptotic decay as a function of control parameter of each constituent ray arrival Sets 1 and 3 are shown to be simply related to the singularity and fringe indices It is argued that many features of the frequency domain representation of the acoustic field in the vicinity of the catastrophes are most easily understood by examining the time domain representation
