ABSTRACT

This research was aimed to capture the practice of foodservice management and food acceptance for change unbalance dietary intake children in a full-day Elementary School. School meal food service management is a program for students to improve the nutrition intake. An observation form, along with an in-depth interview was used to explore food production practice. Quantitative data on food satisfaction as well as food waste was also measured. Observation in food service management explained that low food acceptance was mainly found in vegetable products. The food quality, especially in taste and texture, became the determinant of the high vegetable food waste. Improving food service management production procedures, including menu planning and evaluation, procurement, preparation, and cooking, could be a promising strategy to increase food acceptance and to reduce food waste.

1. INTRODUCTION

Unbalanced dietary intake is frequently found in children. Studies from several developing countries showed that school-age children have poor quality diets [1], [2]. Besides, one study showed several risks of low energy and nutrient intake as well as poor diet quality among children in Indonesia [3]. The quality of school-age children's diets, furthermore, is determined by several factors, including the food availability and eating habits at home and school. A pleasant food environment both at home and at school will shape good eating habits and good-quality diets in school-aged children [4]–[6].

One approach aimed at improving children's eating patterns and health is by the school meal program [7], which is done by giving breakfast or lunch to school pupils. The school feeding program has become a mandatory program in some countries. United States, for example, is one of the countries that require a school feeding program in all schools [8]. Another country, such as Mexico, tends to provide food for at-risk and vulnerable children who attend national education system schools [9]. Although it has been implemented in various countries, in Indonesia, on the other hand, there are still no mandatory feeding programs in schools.

The development of the education system in Indonesia, which adopts the full-day system, causes many schools to be voluntary organize lunch programs for their students. The school lunch program for students is expected to improve the nutrition intake of school-age children. Several studies have found that school lunch programs provide positive benefits for students, for instance, boosting the vitamins and minerals intake, improving eating patterns, and helping them increase in the students' nutritional status [7], [8], [10]–[13].
