,1981 **The Reticuloendothelial System** Herman Friedman,Mario R. Escobar,Sherwood M. Reichard,1980 This
comprehensive treatise on the reticuloendothelial system is a project jointly shared by individual members of the
Reticuloendothelial RE Society and bio medical scientists in general who are interested in the intricate system of cells and
molecular moieties derived from those cells which constitute the RES It may now be more fashionable in some quarters to
consider these cells as part of what is called the mononuclear phagocytic system or the lymphoreticular sys tem Nevertheless
because of historical developments and current interest in the subject by investigators from many diverse areas it seems
advantageous to present in one comprehensive treatise current information and knowledge con cerning basic aspects of the
RES such as morphology biochemistry phylogeny and ontogeny physiology and pharmacology as well as clinical areas
including immunopathology cancer infectious diseases allergy and hypersensitivity It is anticipated that by presenting
information concerning these apparently het erogeneous topics under the unifying umbrella of the RES attention will be
focused on the similarities as well as interactions among the cell types constitut ing the RES from the viewpoint of various
disciplines The treatise editors and their editorial board consisting predominantly of the editors of individual vol umes are
extremely grateful for the enthusiastic cooperation and enormous task undertaken by members of the biomedical community
in general and especially by members of the American as well as European and Japanese Reticuloen dothelial Societies
