**The Artificial Ear** Stuart Blume,2009-12-22 When it was first developed the cochlear implant was hailed as a miracle cure for deafness That relatively few deaf adults seemed to want it was puzzling The technology was then modified for use with deaf children 90 percent of whom have hearing parents Then controversy struck as the Deaf community overwhelmingly protested the use of the device and procedure For them the cochlear implant was not viewed in the context of medical progress and advances in the physiology of hearing but instead represented the historic oppression of deaf people and of sign languages Part ethnography and part historical study *The Artificial Ear* is based on interviews with researchers who were pivotal in the early development and implementation of the new technology Through an analysis of the scientific and clinical literature Stuart Blume reconstructs the history of artificial hearing from its conceptual origins in the 1930s to

the first attempt at cochlear implantation in Paris in the 1950s and to the widespread clinical application of the bionic ear since the 1980s

*Made to Hear* Laura Mauldin, 2016-02-29 A mother whose child has had a cochlear implant tells Laura Mauldin why enrollment in the sign language program at her daughter's school is plummeting The majority of parents want their kids to talk Some parents however feel very differently because curing deafness with cochlear implants is uncertain difficult and freighted with judgment about what is normal acceptable and right *Made to Hear* sensitively and thoroughly considers the structure and culture of the systems we have built to make deaf children hear Based on accounts of and interviews with families who adopt the cochlear implant for their deaf children this book describes the experiences of mothers as they navigate the health care system their interactions with the professionals who work with them and the influence of neuroscience on the process Though Mauldin explains the politics surrounding the issue her focus is not on the controversy of whether to have a cochlear implant but on the long term multiyear undertaking of implantation Her study provides a nuanced view of a social context in which science technology and medicine are trusted to vanquish disability and in which mothers are expected to use these tools *Made to Hear* reveals that implantation has the central goal of controlling the development of the deaf child's brain by boosting synapses for spoken language and inhibiting those for sign language placing the politics of neuroscience front and center Examining the consequences of cochlear implant technology for professionals and parents of deaf children *Made to Hear* shows how certain neuroscientific claims about neuroplasticity

deafness and language are deployed to encourage compliance with medical technology *School Professionals Working with Children with Cochlear Implants* Patricia M.
